

### **COURSE INFORMATION**

Course title: Optimal Decision Making I

Course code: BAMS 506 Credits: 1.5 Session, term, period: 2023W1, Period 1 Class location: HA 337

Section(s): BA1 Class times: Section BA1: M/W 10 AM - 12 PM

Section BA2: M/W 2-4 PM

Makeup classes for no class on Sept 4: Friday, Sept 8 (same times/location)

Course duration: Sept 5 - Oct 6, 2023 Pre-requisites: n/a

Division: Operations and Logistics Co-requisites: n/a

Program: MBAN

Course websites: <a href="https://canvas.ubc.ca">https://canvas.ubc.ca</a>

### **INSTRUCTOR INFORMATION**

Instructor: Steven Shechter, PhD

Phone: 604-822-8340 Office location: HA 477

Email: steven.shechter@sauder.ubc.ca Office hours: By appointment, in-person

or via Zoom

Teaching assistants: Shanshan Luo and Zack Zhu

Office hours: TBD

Email: shanshan.luo@sauder.ubc.ca;

ziqian.zhu@sauder.ubc.ca

# **COURSE DESCRIPTION**

Optimization problems may arise whenever one seeks to use limited resources in the best way. The meaning of "best" varies depending on the setting; for example, it could mean trying to maximize profits in traditional business contexts, maximize lives saved in health care applications, or minimize fuel consumption in environmental applications. Optimization techniques are used in nearly every functional area of business (e.g., logistics and operations management, marketing, finance, and human resources management).

Optimization I covers the foundations of mathematical optimization with continuous decision variables, with an emphasis on a widely applicable method known as "Linear Programming." Brief coverage will also be given to "Nonlinear Programming" and its applications. The course also sets up the follow-on course, Optimization II, which focuses on problems with integer decision variables.

### **COURSE FORMAT**

The course will consist of live lectures, discussions, games, and other in-class exercises.

### LEARNING OBJECTIVES

• To introduce students to the basic concepts and models of continuous optimization.

BAMS 506 1 August 15, 2022

- To enable students to formulate and solve optimization models arising in practice.
- To develop skills in conveying the results of optimization models to managerial audiences.

By the end of the course, students will be able to:

- Formulate an optimization model, solve it using appropriate tools, interpret the results, and derive managerial insights.
- Solve optimization problems using a state-of-the-art optimization software package (Gurobi), called from the Python language, within a Jupyter notebook.
- Understand the principles behind, and properties of, solutions to optimization problems.
- Provide several examples of companies and organizations successfully applying optimization modeling.

# SUSTAINABLE DEVELOPMENT GOALS (SDGS)

At UBC Sauder, we are committed to responsible business practices that can have transformative impacts on society. One of the ways we are reinforcing our commitment to responsible business is by showcasing relevant content in our courses via the lens of the <u>United Nations Sustainable Development Goals</u>. In this course, we will touch on topics that include (but are not limited to) the following goals:

Sustainable Development Goal	Description of how and when the goal is covered in the course.
Goal 2: Zero Hunger  2 ZERO HUNGER	We will discuss a famous optimization problem, known as "The Diet Problem", which helps in identifying food plans that meet nutritional targets at low costs. This idea of using optimization for developing sustainable diets has been explored in many studies.
GOAL 3: Good Health and Well-being  3 GOOD HEALTH AND WELLBEING	The course will introduce students to several examples of how optimization modeling has been used in <a href="health care applications">health care applications</a> . These include <a href="physician scheduling">physician scheduling</a> , <a href="facility location models">facility location models</a> , and <a href="higher transformation">kidney donation</a> .
Goal 11: Sustainable Cities and Communities  11 SUSTAINABLE CITIES AND COMMUNITIES	Many interesting applications of prescriptive analytics relate to community planning. Examples include optimizing school bus routes and creating affordable housing plans.

<u>BAMS 506</u> 2 August 15, 2022

### **ASSESSMENTS**

# **Summary**

Component	<u>Weight</u>
Three Group Assignments (15% each)	45%
One Group Project	45%
Class participation/Professionalism	<u>10</u> %
Total	<u>100</u> %

# **Details of Assessments**

# **Group Assignments:**

There will be 3 group assignments during this course, performed by teams consisting of 3-5 students each. You will be *randomly assigned* to groups for each homework set. I realize that random matchings of students for assignments may create some discomfort for some people. However, there is important real-world experience gained with this approach. Most of us do not end up with professional colleagues of our choosing, and so this is meant to simulate the need to successfully complete various jobs with random co-workers. That being said, you will get to choose your own group for the course project; after all, maybe you will create a start-up with classmates you know well.

You may either submit your assignments (and project) as: a) self-contained Jupyter notebooks, with all the discussion, models, and "storytelling with analytics" embedded in the notebook, or b) creating an "Excel to Gurobi" input Excel file (to be explained in class) along with a Word document containing your discussions and storytelling (with screenshots of Gurobi results as needed). If you are taking option a), then be sure your notebooks are well-documented (e.g., clear labeling of variables, markdown text and comments clarifying steps of the code), so that someone who has not developed the model can easily understand it and replicate your results and findings. If you are taking option b), make sure your input file is clearly labeled, so that it's clear what the objective, decision variables, and constraints of your model are.

### **Group Project:**

See end of this document for details.

# Participation/Professionalism:

The professionalism component includes being to class on time, using laptops for in-class activities only, avoiding distractions (e.g., checking cell phones), and treating others with respect. More aspects of professionalism are covered below in the "Robert H. Lee Graduate School" and "University" policies sections.

There are a number of ways to actively participate in the course. These include: asking and answering questions during lecture as well as outside of class via Canvas, sharing thoughts/ideas/news stories/etc. that promote peer-to-peer learning, participating in office hours, etc.

#### Marking Policy

All assessments in the course (assignments, project, participation/professionalism) will be marked on a "CheckPlus/Check/CheckMinus" scale. These will then be converted into a number. By default, "Check" means "good" and will receive 80%; "CheckPlus" means "very good" and will receive 85%; "CheckMinus" means "below average" and maps to 75%. More specifically, for assignments and the

<u>BAMS 506</u> 3 August 15, 2022

project, "CheckPlus" means that the work was thorough and thoughtful, the model development was entirely (or nearly entirely) correct, and that recommendations were clearly justified. "Check" means that the work was reasonable but with some room for improvement, due to modeling or analysis mistakes and/or due to recommendations that were not as compelling as they could be. "CheckMinus" means that the work was unsatisfactory with significant room for improvement. For example, model development contained several errors and/or recommendations and explanations were unclear or unsupported by the evidence. The modal mark will generally be a "Check." Also, CheckPlus/Check/CheckMinus marks need not always map exactly to 85%/80%/75%. Some differences in quality may be accommodated by assigning different numerical marks, but this will be the exception. For example, while most CheckMinus solutions will receive 75%, a really poor submission may receive a lower mark. Also, while most CheckPlus solutions will receive 85%, an especially outstanding solution may receive a higher mark.

### LEARNING MATERIALS

### **Requirements:**

• The lectures will be self-contained and no textbook is required for this course. Copies of the slides used in class will be available on the course website *after* class. You should supplement them with your own notes taken during the lectures.

# **Suggested Reading Materials:**

- Hillier, Frederick S. and Lieberman, Gerald J. (2014). Introduction to Operations Research, 10th Edition. McGraw Hill.
  - This is available for temporary loan through course reserves; you can ask for it at the front desk of the David Lam library.
  - Relevant sections in the 10th edition are indicated in the Course Schedule below (marked with "HL" in the readings column).
  - While this text is not required, I believe that anyone pursuing a career in Operations Research or Prescriptive Analytics would benefit by having this on their bookshelf.

# **Technology Requirements:**

- Jupyter, Python, and Gurobi software, either installed locally on your computer, or run on the cloud via Google Colab (see "Gurobi and Python Setup" doc on the course website).
- It is highly recommended that students review the "Introduction to Data Science in Python" course on DataCamp prior to beginning this course.

### COURSE-SPECIFIC POLICIES AND RESOURCES

Missed or late assignments/projects

Late submissions will not be accepted and will receive a grade of zero (this is standard for RHL courses).

### **Academic Concessions**

If extenuating circumstances arise, please contact the RHL Graduate School program office as early as reasonably possible, and submit an <u>Academic Concession Request & Declaration Form</u>. If an academic concession is granted during the course, the student will be provided options by RHL, or by the instructor in consultation with RHL, per UBC's policy on Academic Concession.

# Code Plagiarism

Code plagiarism falls under the UBC policy for <u>Academic Misconduct</u>. Students must correctly cite any code that has been authored by someone else or by the student themselves for other assignments. Cases of "reuse" may

<u>BAMS 506</u> 4 August 15, 2022

include, but are not limited to:

- the reproduction (copying and pasting) of code with none or minimal reformatting (e.g., changing the name of the variables)
- the translation of an algorithm or a script from a language to another
- the generation of code by automatic code-generations software (see more in section below on the "use of Al")

An "adequate acknowledgement" requires a detailed identification of the (parts of the) code reused and a full citation of the original source code that has been reused.

Students are responsible for ensuring that any work submitted does not constitute plagiarism. Students who are in any doubt as to what constitutes plagiarism should consult their instructor before handing in any assignments.

#### POLICIES APPLICABLE TO COURSES IN THE ROBERT H. LEE GRADUATE SCHOOL

#### **Attendance**

Excepting extenuating circumstances, students are expected to attend 100% of their scheduled class hours. Absent students limit their own academic potential, and that of their classmates, and cause unnecessary disruption to the learning environment. Students missing more than 20% of the total scheduled class hours for a course (including classes held during the add/drop period) without having received an academic concession will be withdrawn from that course. Withdrawals, depending on timing, could result in a "W" or an "F" standing on the transcript.

# COVID-19 Policies for Attendance & Academic Concessions:

If a student feels unwell, they should stay home and send a courtesy email to each impacted instructor and cc their program manager. The student should also submit an <u>Academic Concession Request & Declaration Form</u>.

If a student suspects possible COVID-19 infection, they should use the BC Ministry of Health's <u>self-assessment</u> tool, to help determine whether further assessment or testing for COVID-19 is recommended.

# **Punctuality**

Students are expected to arrive for classes and activities on time and fully prepared to engage. Late arrivals may be refused entry at the discretion of the instructor or activity lead. Students arriving later than halfway through a scheduled class will be treated as absent for that class.

# **Electronic Devices**

Devices such as laptops, tablets, and cell phones are not permitted to be used in class unless directed by the instructor for in-class activities. Students who do not follow the School's policy in this regard may be required to leave the room for the remainder of the class, so that they do not distract others. Research shows that students' use of laptops in class has negative implications for the learning environment, including reducing their own grades and the grades of those sitting around them.

#### Citation Style

Please use the American Psychological Association (APA) reference style to cite your sources.

Details of the above policies and other RHL Policies are available at: http://www.calendar.ubc.ca/vancouver/index.cfm?tree=12,199,506,1625

<u>BAMS 506</u> 5 August 15, 2022

### UNIVERSITY POLICIES AND RESOURCES

UBC provides resources to support student learning and to maintain healthy lifestyles but recognizes that sometimes crises arise and so there are additional resources to access including those for survivors of sexual violence. UBC values respect for the person and ideas of all members of the academic community. Harassment and discrimination are not tolerated nor is suppression of academic freedom. UBC provides appropriate accommodation for students with disabilities and for religious observances. UBC values academic honesty and students are expected to acknowledge the ideas generated by others and to uphold the highest academic standards in all of their actions. Details of the policies and how to access support are available on the UBC Senate website at <a href="https://senate.ubc.ca/policies-resources-support-student-success">https://senate.ubc.ca/policies-resources-support-student-success</a>.

# Respect for Equity, Diversity, and Inclusion

The UBC Sauder School of Business strives to promote an intellectual community that is enhanced by diversity along various dimensions including status as a First Nation, Metis, Inuit, or Indigenous person, race, ethnicity, gender identity, sexual orientation, religion, political beliefs, social class, and/or disability. It is critical that students from diverse backgrounds and perspectives be valued in and well-served by their courses. Furthermore, the diversity that students bring to the classroom should be viewed as a resource, benefit, and source of strength for your learning experience. It is expected that all students and members of our community conduct themselves with empathy and respect for others.

# Academic Integrity

The academic enterprise is founded on honesty, civility, and integrity. As members of this enterprise, all students are expected to know, understand, and follow the codes of conduct regarding academic integrity. At the most basic level, this means submitting only original work done by you and acknowledging all sources of information or ideas and attributing them to others as required. This also means you should not cheat, copy, or mislead others about what is your work. Violations of academic integrity (i.e., misconduct) lead to the breakdown of the academic enterprise, and therefore serious consequences arise and harsh sanctions are imposed. For example, incidences of plagiarism or cheating may result in a mark of zero on the assignment or exam and more serious consequences may apply if the matter is referred to the President's Advisory Committee on Student Discipline. Careful records are kept in order to monitor and prevent recurrences.

# Use of Artificial Intelligence

You may use ChatGPT or other similar generative AI tools <u>only to generate initial drafts of code</u>, should you find that helpful. Like any other outside source (e.g., Stack Overflow, "googling" around for snippets of code), you need to reference it and acknowledge its use. This includes submitting your ChatGPT (or similar AI tool) logs, including all prompts and responses. Your instructor or TA may request to see the log. Failure to fully declare the use of this tool will be considered academic misconduct. Also, be aware of the limitations of these tools. One limitation is that it gets things wrong. Often. So while they may help get some initial code in place as a foundation, you are responsible for checking it (super) carefully.

ChatGPT (and similar tools) <u>may not be used to generate natural writing</u> (e.g., explanations, storytelling with analytics, etc.) in your assignments and projects. In other words, all prose should originate from and be generated by you.

### **COPYRIGHT**

All materials of this course (course handouts, lecture slides, assessments, course readings, etc.) are the intellectual property of the instructor or licensed to be used in this course by the copyright owner. Redistribution of these materials by any means without permission of the copyright holder(s) constitutes a breach of copyright

<u>BAMS 506</u> 6 August 15, 2022

and may lead to academic discipline and could be subject to legal action. Any lecture recordings are for the sole use of the instructor and students enrolled in the class. In no case may the lecture recording or part of the recording be used by students for any other purpose, either personal or commercial. Further, audio or video recording of classes are not permitted without the prior consent of the instructor. Students may not share class Zoom links or invite others who are not registered to view sessions.

### **ACKNOWLEDGEMENT**

UBC's Point Grey Campus is located on the traditional, ancestral, and unceded territory of the  $x^w m \partial k^w \partial \dot{\gamma} \partial m$  (Musqueam) people, who for millennia have passed on their culture, history, and traditions from one generation to the next on this site.

BAMS 506 7 August 15, 2022

# **COURSE SCHEDULE**

Class #	CLASS TOPICS	ACTIVITIES / READINGS	ASSIGNMENTS / DELIVERABLES
Week 1	<ul> <li>Introduction to optimization</li> <li>Introduction to Linear Programming: formulations and solution techniques</li> <li>Burrito Optimization Game</li> </ul>	HL Chs.1-3, 4.1	Register for Gurobi to be ready to play "The Burrito Optimization Game" in class 2 (the make-up class on Friday) Sept 8: HW1 assigned
Week 2	<ul> <li>Linear Programming (LP) applications and solutions</li> </ul>		Sept 15: Project Proposal due
Week 3	<ul> <li>Managerial insights</li> <li>Sensitivity analysis</li> <li>Shadow prices and reduced costs</li> </ul>	HL 4.7, 6, 7.1-7.3	Sept 17: HW1 due Sept 18: HW2 assigned
Week 4	<ul><li>LP "tricks"</li><li>"Soft" vs. "Hard" constraints</li><li>Goal Programming</li></ul>	Web resources <sup>1</sup>	Sept 27: HW2 due Sept 28: HW3 assigned
Week 5	<ul> <li>Multi-Objective         Optimization     </li> <li>Introduction to         Nonlinear         Programming (NLP)     </li> </ul>	HL 13.1-13.5	Oct 6: HW3 due
Week 6	Final Project		TBD

¹ E.g.,

# **Project Details**

# Overview

The purpose of the course project is to gain optimization modeling, analysis, and "Storytelling with Analytics" experience. Groups of 3-5 students should propose an optimization project that interests them and that I approve after reviewing the proposal. You may form your own groups, or let me know if you need help finding a group.

The project may be something that groups come up with on their own, or it may be based on a case study that requires optimization modeling (and which does not have a publicly available solution). One source of such case studies is the journal: *INFORMS Transactions on Education*. You can access this via the UBC Library here: <a href="https://gw2jh3xr2c.search.serialssolutions.com/?sid=sersol&SS\_jc=TRANONED&title=Transactions%20on%20education">https://gw2jh3xr2c.search.serialssolutions.com/?sid=sersol&SS\_jc=TRANONED&title=Transactions%20on%20education</a>

Examples of past projects include:

- Staffing optimization at a clothing store
- Beer production planning
- Assigning pharmaceutical sales representatives to different regions of Turkey
- Airline revenue management

## **Deliverables and Deadlines**

Project component	Due
Proposal	Sept 15 (11:59 PM)
Final Deliverables	TBD (during exam week)

## <u>Proposal</u>

In 1-2 paragraphs, briefly describe your project proposal. If you plan to pursue your own project idea, describe the problem and the questions you plan to investigate. If you are planning to work on a published case study, provide the link or pdf to the case and the questions you plan to answer around it. I will give you feedback on your proposal within 24 hours of your submitting it (you can submit it prior to Sept 16).

# Final Deliverables

You may either submit your Project by: a) creating a self-contained Jupyter notebook, with all the discussion, models, and "storytelling with analytics" embedded in the notebook, or b) creating an "Excel to Gurobi" input Excel file (to be explained in class) along with a Word document containing your discussions and storytelling (with screenshots of Gurobi results as needed). If you are taking option a), then be sure your notebooks are well-documented (e.g., clear labeling of variables, markdown text and comments clarifying steps of the code), so that someone who has not developed the model can easily understand it and replicate your results and findings. If you are taking option b), make sure your input file is clearly labeled, so that it's clear what the objective, decision variables, and constraints of your model are.

Include the following sections in your report:

- 1. An Executive Summary
- 2. Introduction
- 3. Model formulations
- 4. Model results
- 5. Discussions/Recommendations/Conclusions

<u>BAMS 506</u> 9 August 15, 2022
