Today, Canada's ocean activities contribute only ~1% to the national economy and 2.5% worldwide. Blue Economy aims to sustainably optimize Canada's ocean resources to improve livelihood and ecosystem health.

@GrahamBrownlee

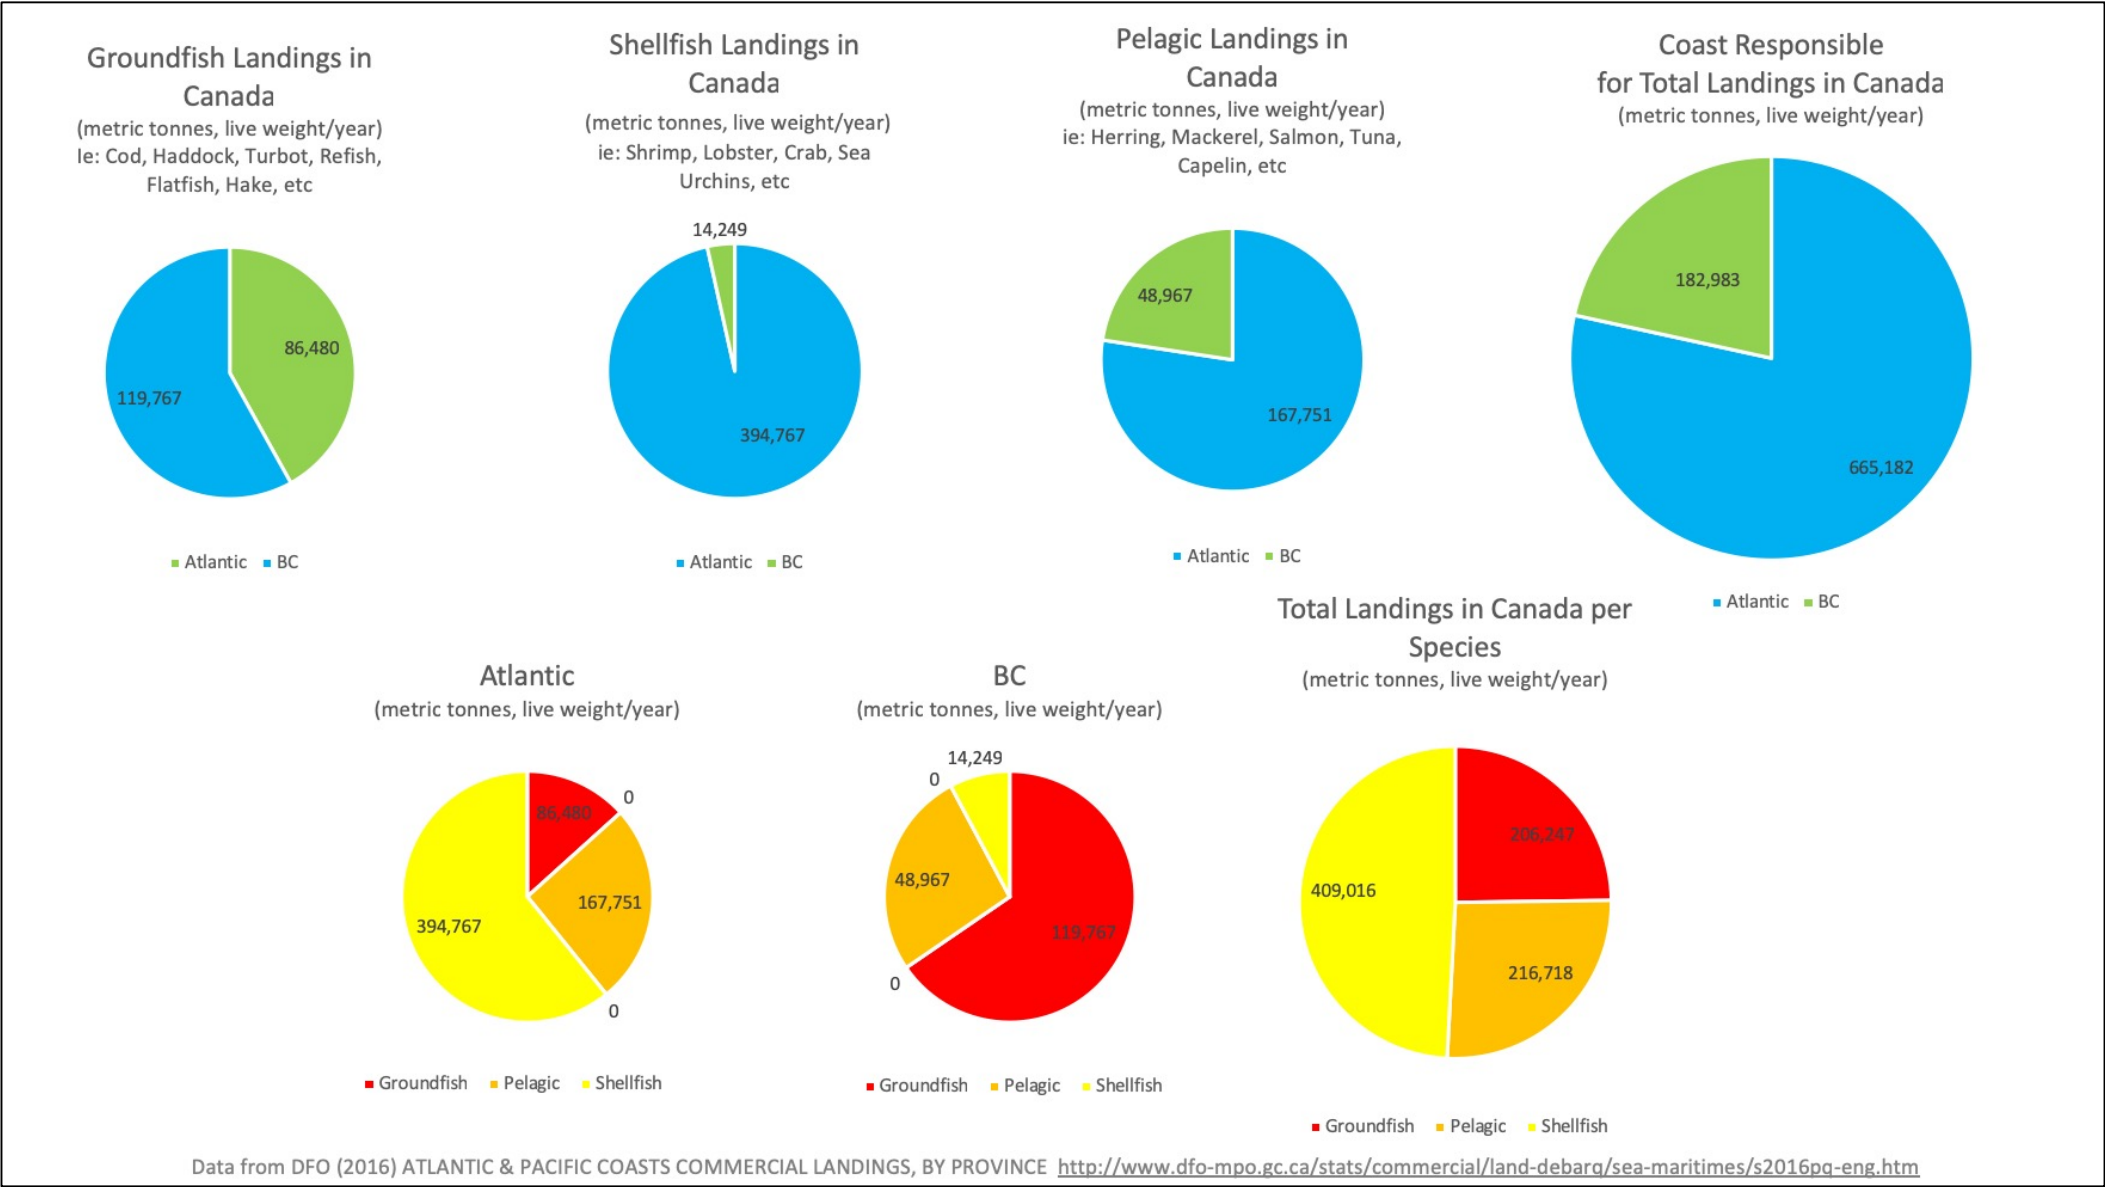

Learning about cases on Indigenous law and fishing rights brought before the Supreme Court of Canada for my [#OceanConsvnUBC](#) class. The Van der Peet trilogy set enormous legal precedent for rulings on fishing/fisheries, Aboriginal rights and sovereignty in problematic ways

9:52 PM - 28 Jan 2019

@jasminekeller_: Check out this visual representation of Canada's SeaFisheries that I put together for my Status of Canadian Fisheries Expert Group! It shows commercial landings between Atlantic & Pacific Fisheries for Groundfish, Pelagic, & Shellfish species. Data by DFO (2016) #OceanConsvnUBC

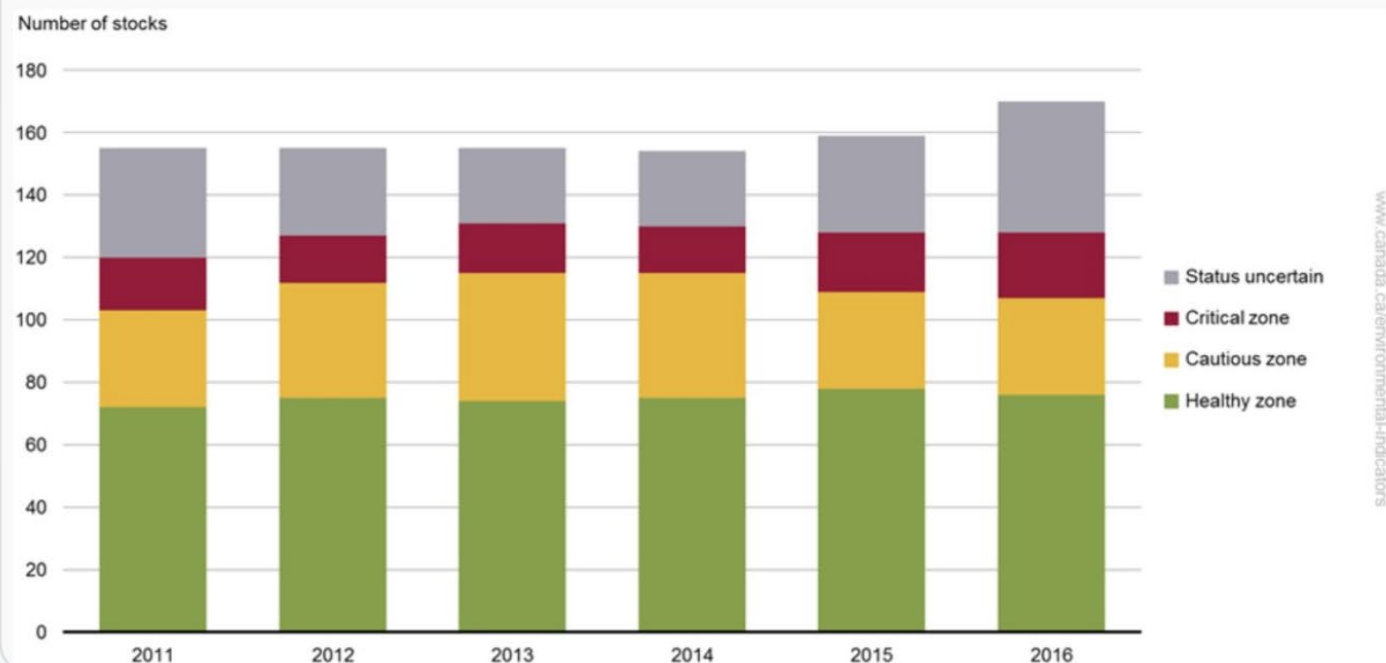

Nick Hsieh @NickHsieh_ · 37m

Looking at this graph on the status of Canada's fish stock, you might be inclined to say that the fish stock has stabilized. But, we need to question why is there still less than 50% classified healthy and 25% still uncertain. No more status quo! [#OceanConsvnUBC](#)

Status of major fish stocks, Canada, 2011 to 2016

“Canadas Marine Conservation has really been a shell of its former self. Failure to implement integrated management backed by science? Yikes”

@fishingavin

Kaylie

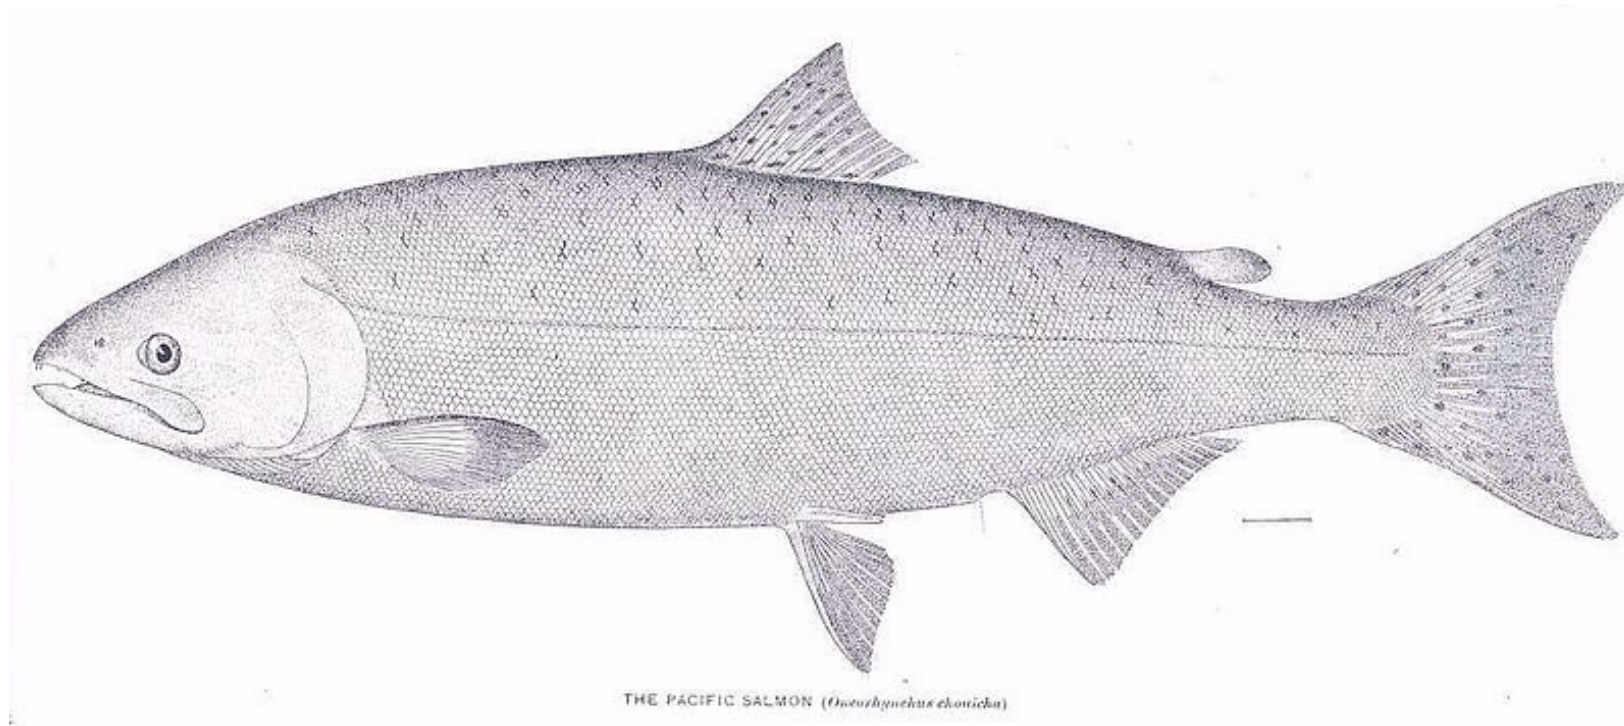

@kaylie_dan

feeling struck by the many layers of law and understanding (Indigenous, fed, prov, UN) surrounding the oceans. in Canada, these laws and policies about the oceans have many challenges, but change is in the works with lots of potential to (re)build in better ways [#OceanConsvnUBC](#)

@hannosoutham

The distilled evolution of Canadian Oceans Policy: We came up with the Oceans act but have yet to figure out how to use it.

We had the fisheries act but then it got cut to pieces. The Arctic is a mess. And now we are sort of on the uptrend.

Eugenie Jacobsen

@EugenieJacobsen

In 2001, the Committee on the Status of Endangered Wildlife in Canada (COSEWIC) listed Southern Resident Killer Whales as endangered. Elevated noise pollution, prey decline, and toxicity exposure is currently threatening the mammals towards entire species loss. [#OceanConsrvnUBC](#)

@ZaynahNK

Canada has the longest coastline in the world - 202,080 km across the Pacific, Arctic, and Atlantic Oceans. All that coast, plus the 4th largest ocean territory in the world, generates 1% of Canada's economy & 2.5% of the global economy. (Source: @CanadaOSC)
[#OceanConsvnUBC](#)

Canadian fish stocks are poised to recover, and most fisheries are enacting or have developed a recovery plan if they were ever in threat of seriously harming the fish population. The country set lofty goals for itself, and it took years to get started, but we are close!

-@OedipusOctopus

**Protecting Canadian fish
stocks is important for
our future. One method
is the Precautionary
Approach.**

Did you know between 2013 - 2017 Canada
failed to recognize ANY fish as "at risk" !!!!
They were simply ignored

Indigenous fisheries rights are protected under Section 35 of the Constitution Act, but rulings like *R v Van der Peet* frame those rights as a historical artifact rather than a way of making a living. But it's changing! Check it out: [cbc.ca/news/canada/br...](https://www.cbc.ca/news/canada/br...)

CBC Indigenous, 2018

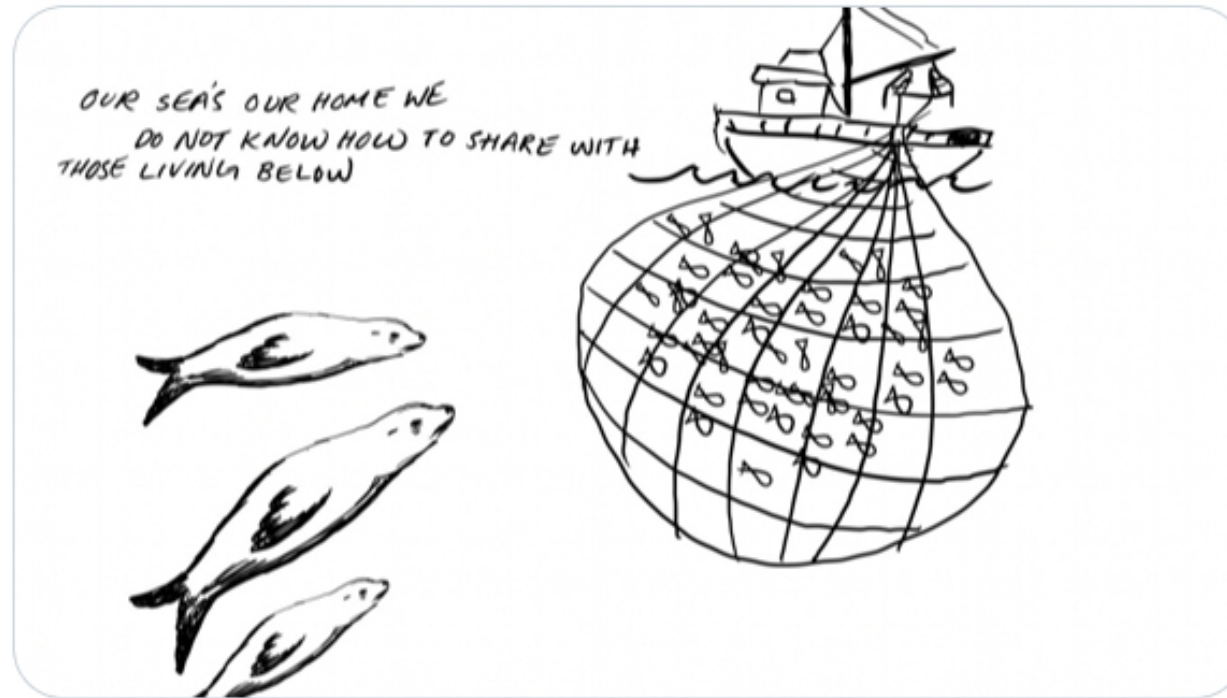

THE IDEA THAT WE CAN ACCURATELY QUANTIFY
THE ECONOMIC VALUE OF THE OCEAN
ASTOUNDS ME STILL. TO THINK HUMANKIND HAS
AN ADEQUATE UNDERSTANDING OF SUCH A
VAST AND CRUCIAL SYSTEM TO ASSIGN IT A
DISCREET VALUE SEEMS IMPROBABLE.

@holly_fel

Charlotte Matthews @charmatthe... · 1s ✓

We gain a lot of economic value from our oceans in Canada, but we need better ways to ensure other creatures are still benefitting from its resources too -

@linneamorgan_14:

Researching indigenous rights in relation to the oceans in Canada, & found some recent news about co-governance of marine resources and MPAs. The Inuit & Coastal First Nations are spearheading this push & hopefully it's a sign of good things to come for our oceans [#OceanConsvnUBC](#)

The co-governance of #MPAs already taking place between Indigenous Peoples and the Government of Canada could help our country meet 2020 national biodiversity targets, and will hopefully aid in the ongoing process of reconciliation.
