PARTICIPATORY LEARNING AND ACTION TECHNIQUES and MOOD LINES

Vivienne Bozalek
University of the Western Cape, South Africa

vbozalek@uwc.ac.za

Focus of this presentation

- This presentation is about how to use Participatory Learning and Action (PLA) techniques – with an emphasis on moodlines as one specific technology
- The presentation uses the context of higher education as an example of a field where such techniques can be used to add value to assessments and improve planning and practices

Different Views of Higher Education

Table 1.1 Broad and narrow conceptions of the role of higher education

	Product	Task	Research	Knowledge society
Narrow conceptions of HE	The specialised and knowledgeable individual equipped to play an economic role in society	Production of a skilled workforce to attain economic goals	"Cutting edge" research to gain sectoral or national competitive advantage	Higher education as an exportable commodity; a contributor towards economic goals
Broad conceptions of HE	The reflective and adaptive team player equipped to respond creatively to all forms of change	Contributor to the lifelong development of "responsible global citizens"	International collaboration in research and information sharing	Higher education's "role of service" to society; multiple partnerships to facilitate knowledge distribution

(AUT/DEA 1999; cited in DEA 2003)

Taylor & Fransman (2004:6)

The usefulness of PLA for higher education (HE)

- Participatory parity- inclusive
- Good reflective tool – alternate ways of expressing
- Often leads to new insights
- Provides stimulus for discussion
- Non-threatening “playful” techniques
- Promotes social learning
- Includes emotional aspects
- Opportunities to challenge and deepen knowledge

Ways in which we have found PLA useful in higher education

- Dealing with difference
- Promoting collaboration between students and the institution/faculty/department
- Learning techniques to use in own disciplines
- Modelling democratic and respectful forms of practice
- Active form of learning > participation

Limitations of PLA techniques

- Drawings are only a springboard for discussion and analysis
- Drawings and discussions reflect subjective experiences
- Can be unsettling/discomforting – needs management
- How useful it is depends on skills of facilitator
- Time consuming to plan and implement
- Resistance from some participants

Examples of how PLA techniques have been used in HE

- Research techniques for social work students at UWC
- Factors affecting student learning at UWC
- Community, Self and Identity module for students across the universities
- Women's Health and Well-Being collaborative course
- Masters in Child and Family Studies course
- Professional development course on teaching and learning at UWC

Some common techniques which could be used in HE

What students said about PLA techniques

The drawing exercises let us 'play', and took the 'seriousness' and nervousness out of the situation we were placed in...Helped us in working together as a team in the way that we were no longer worried about expressing our feelings even though they sometimes were conflicting.

As soon as you start drawing one thing you immediately think of all the other things that link up with your initial idea. After the drawings had been made, I was surprised to see the things that were in front of me on my paper.

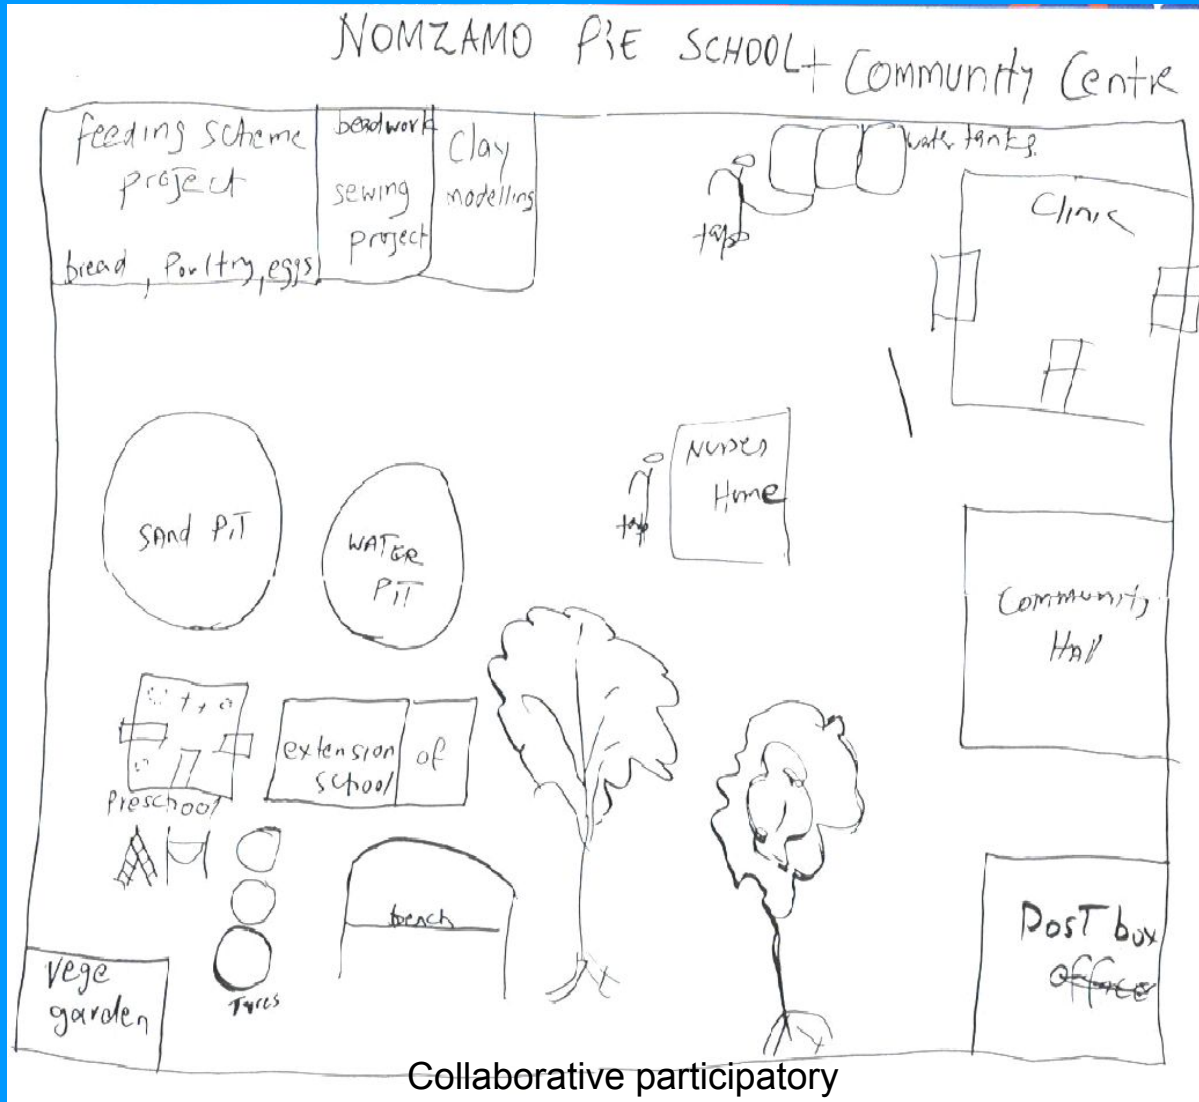

Learnings: Knowledge of Self

Through mapping my own community and the available (and blatant scarcity of) resources, I got the opportunity to reflect on my community not only in terms of resources, but also communal ethos (including prevailing prejudices, attitudes towards gender, and even racism), 'Coloured' culture (as I've always had immense difficulty defining to others what it means to be a 'Coloured' person, or defining myself as for example a 'Coloured male')

Visioning

- People come up with their vision for how things might be and it can widen their thinking as well as indicating the things that are important to them. This could be drawn, modelled, acted or sung. It serves as a starting point for discussion of what actions could be taken.

Vision of ideal preschool

Collaborative participatory
research

This shows what students identified as being ideal for helping them to learn at university

Mapping

- Mapping can include mapping of social, demographic, health and service issues, opportunities or resources
- Can be drawn on the ground or on paper, models can be made, natural resources used
- Provides a starting point for discussion or for prioritising issues for change

Things found helpful for learning

Body maps – used to map illnesses such as HIV/AIDS emotions etc

laborative part
research

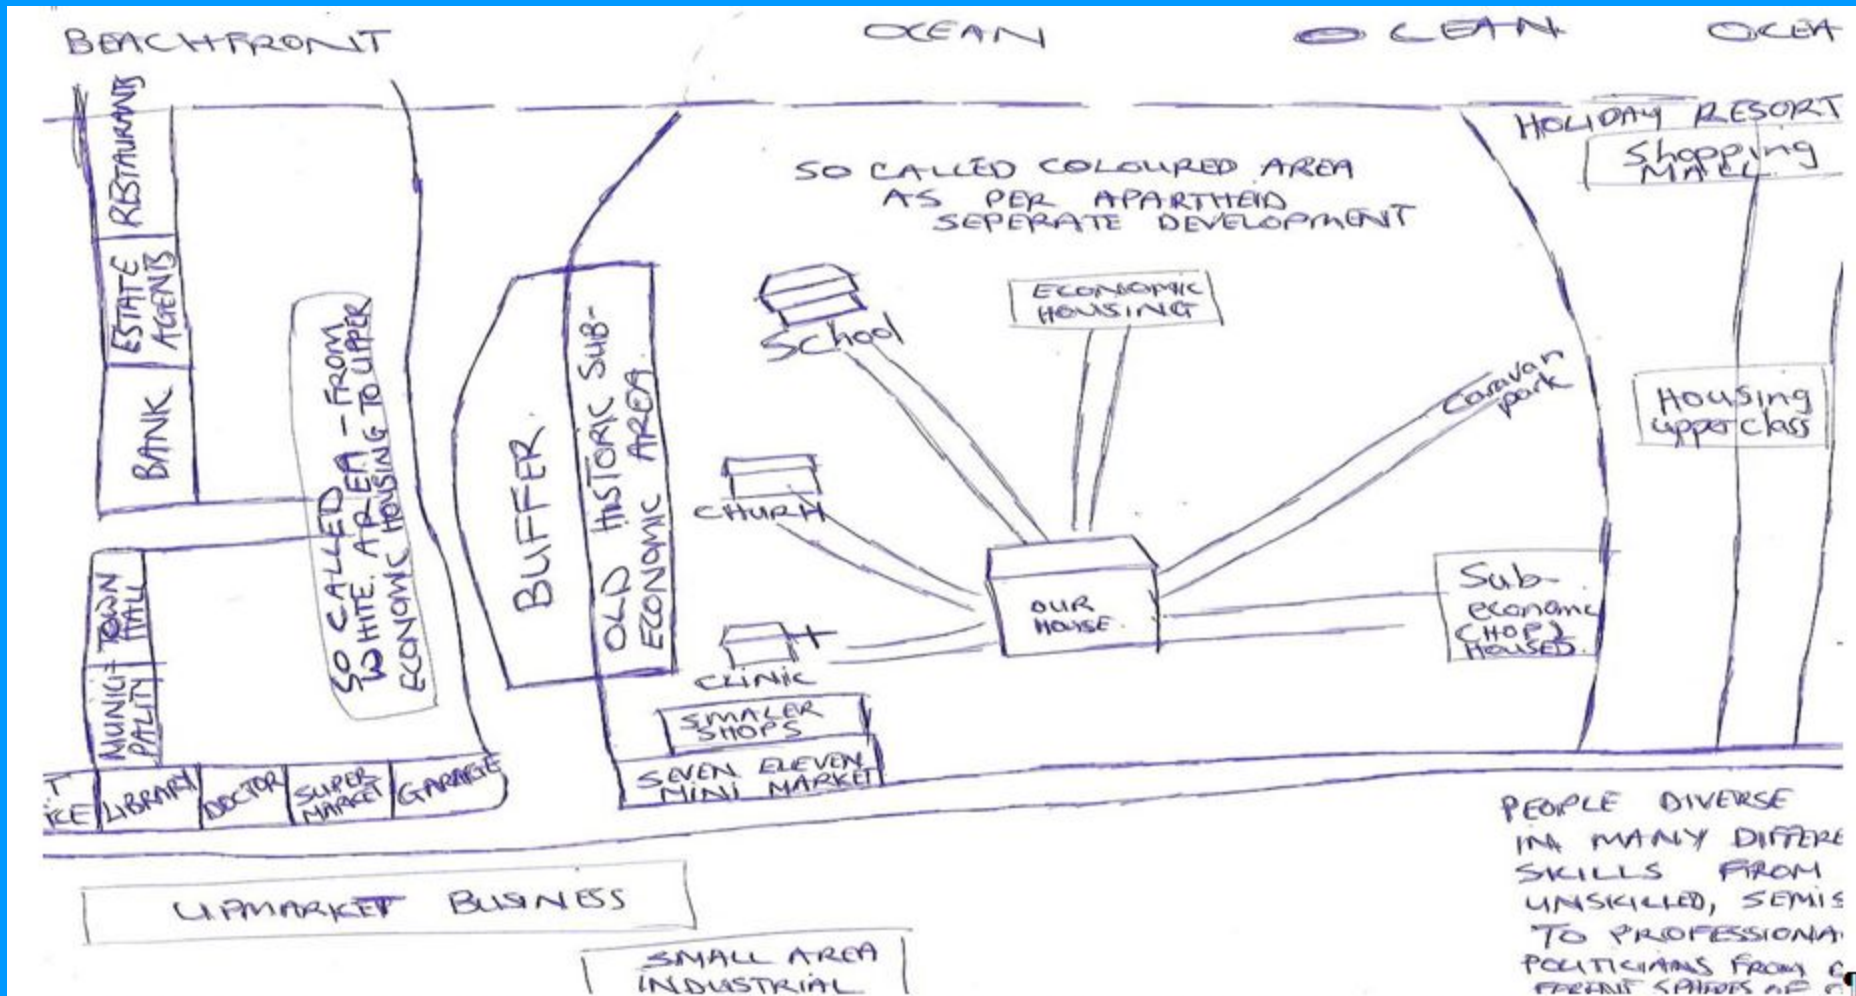

Body map - Example from Cornwall (1999)_ Illnesses and Where They are in the Body

Community Maps

Map used in Masters in Child and Family Course

Annexure 2: Resources, places, services and people mapping important to the family, March 2008. Based on the PLA mapping tools.

On the upper left, M shows her sister washing dishes in a large plastic basin outside the house. M is waiting for the sun to dry her hair, she has just dyed it. A girl from Canaansland fetches water from the communal tap. The pavement along Burghersdorp street on the western side of Canaansland is central in M's drawing. M, her sister and a friend skip on the pavement; the circle of stones to the left of the girls shows that a game of *diketo* was played prior to this. Just below the pavement is a new shop that M likes. It is behind a school, across Burghersdorp Street and, as yet, not well patronised. M's family buys groceries there. Of the church, M says: "I don't like it because it's for Indians only; they don't want a black person there. I went there and I was expelled." She visits the cinema shown near the church; her mother gives her money for this.

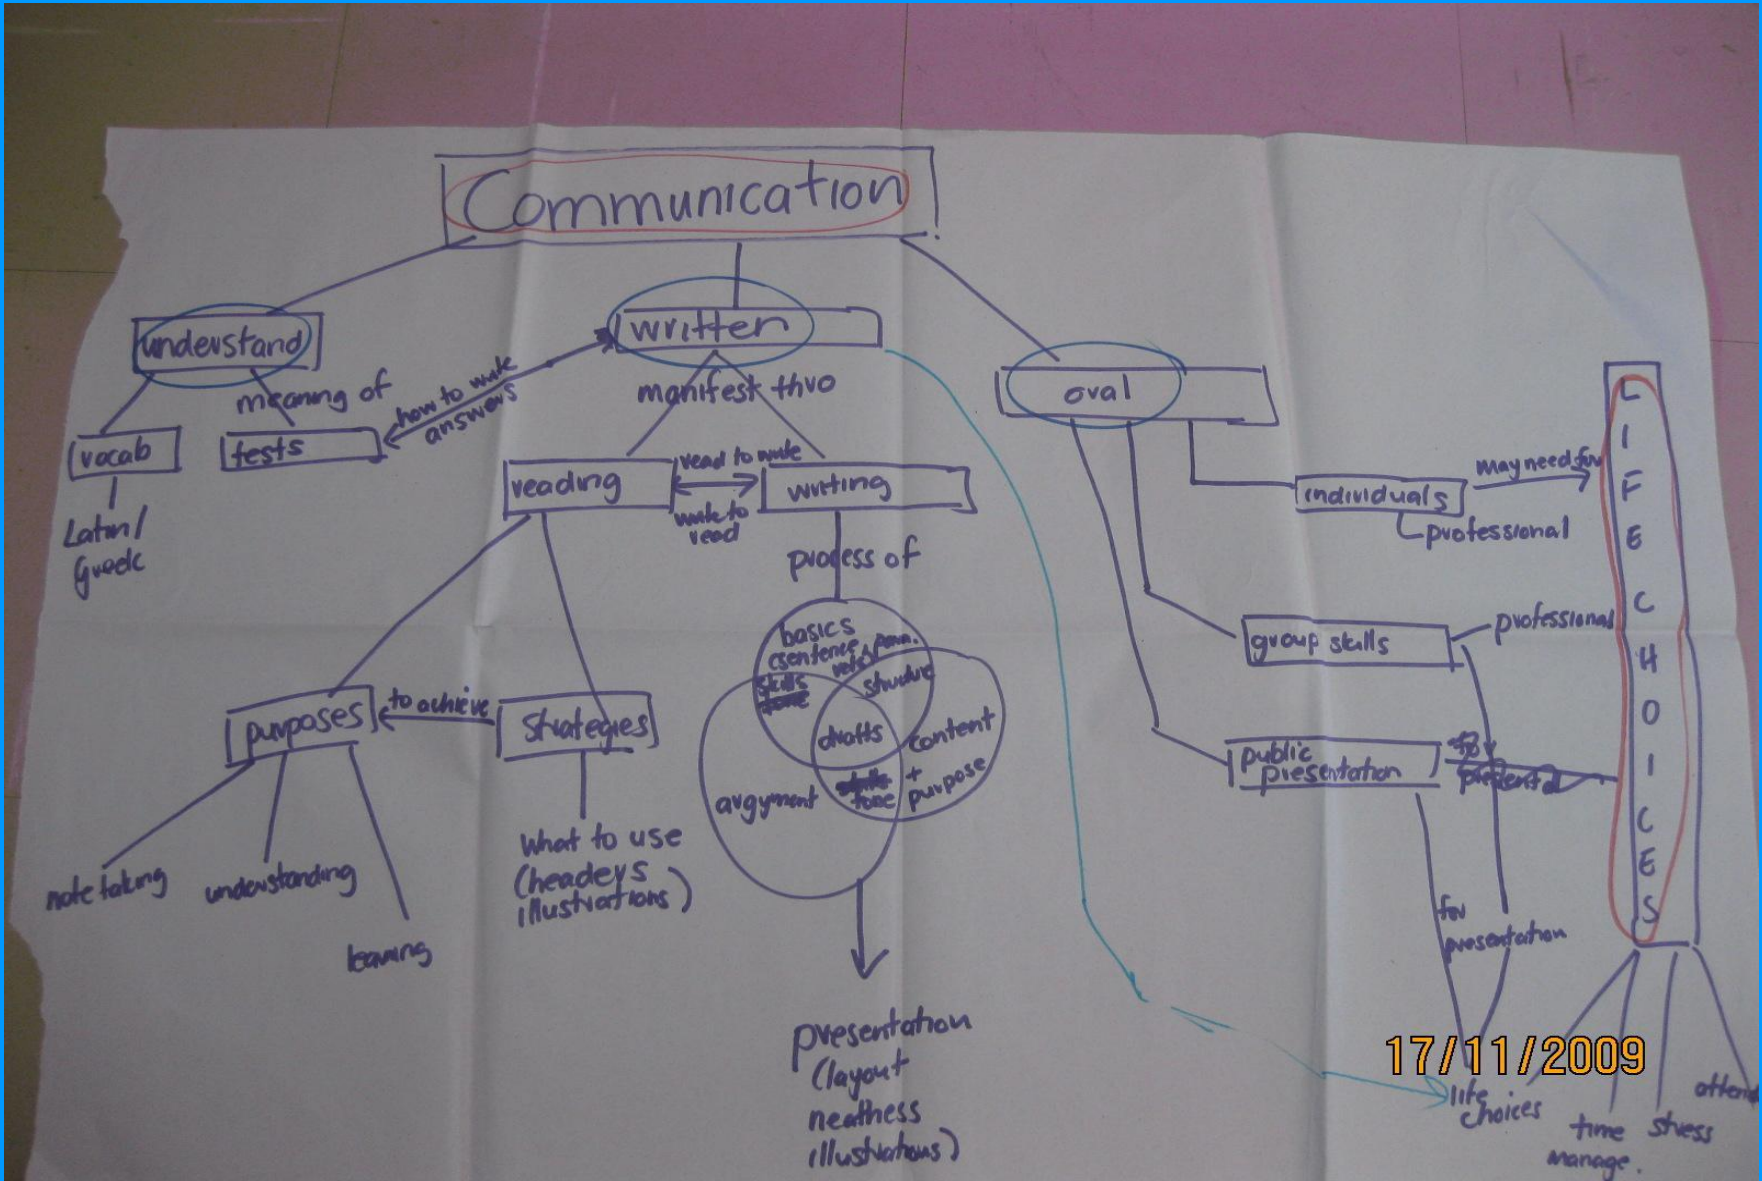

Community mapping

This includes mapping of social, demographic, health and service issues, opportunities or resources. These can be drawn on the ground or on paper, models can be made, natural resources used and provide a starting point for discussion or for prioritising issues for change. Example Swart Kruger (2000)

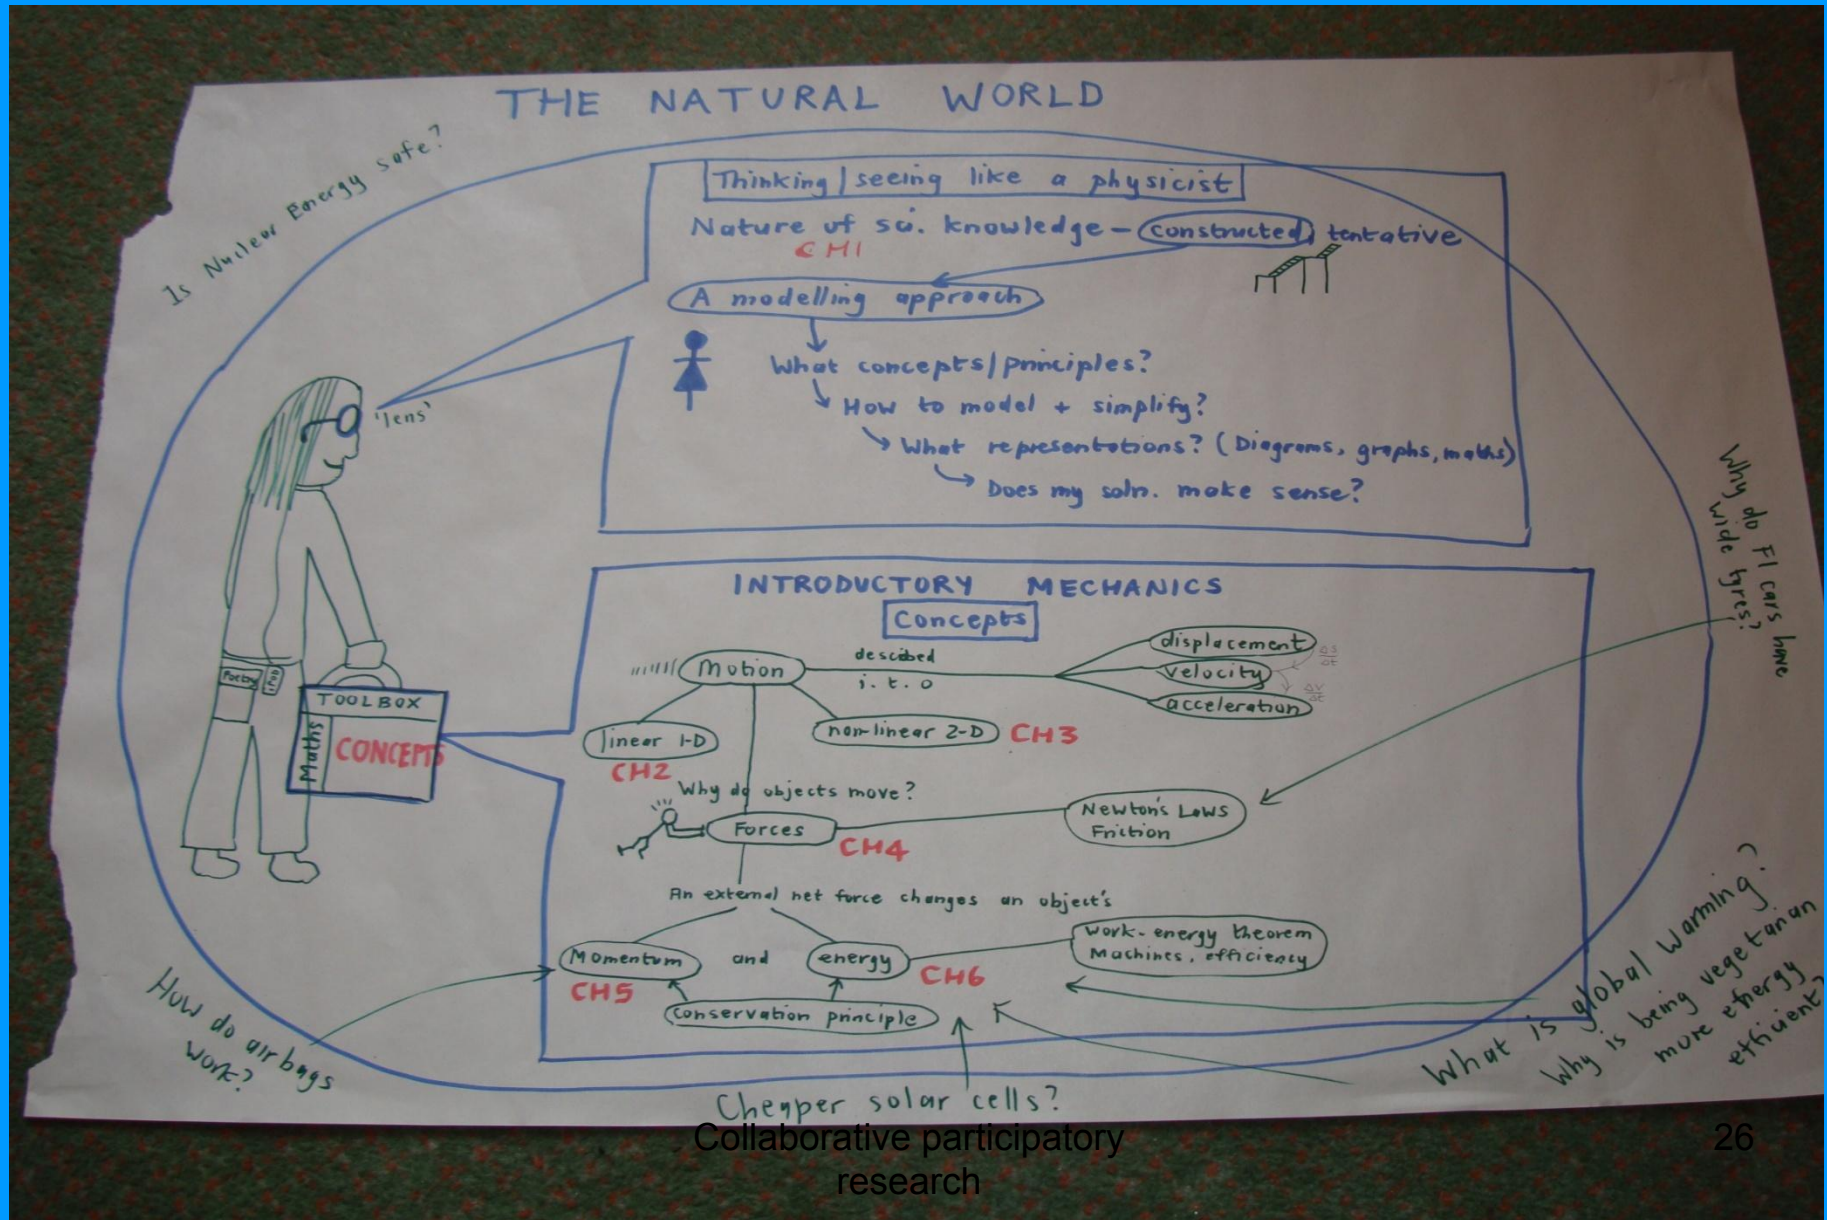

Map used in Higher Educators course

Concept maps

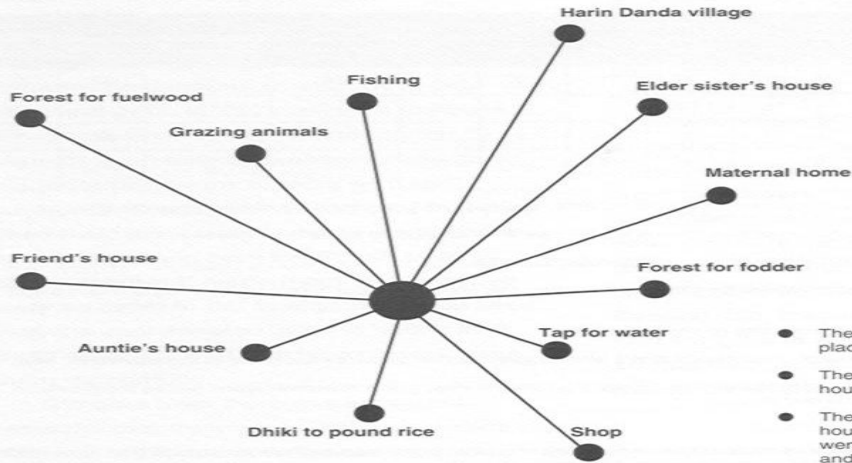

Concept maps (Science)

Mobility maps

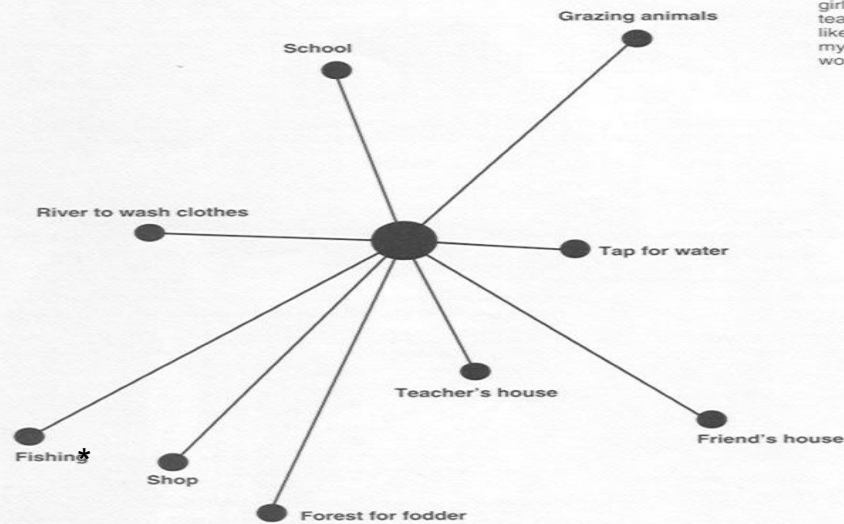

Figure 5.4, Mobility map of Maya Rani Waiba and her younger brother Singh Bahadur Waiba: a reflection of their activities, Hayutar, Bastipur.

Maya Rani Waiba (a Tamang girl, aged 14)

- The children were asked to draw the places that they often went to.
- They drew a circle to represent their house.
- Then they drew circles around the house to represent the places that they went to, showing the relative distance and direction from the house.
- These maps are copies of the children's drawings.
- Notice that Maya Rani has not drawn school on her map. She said, "Boys and girls can earn money and become teachers if they are educated. I would like to go to adult literacy classes but my parents don't let me go as I have to work."

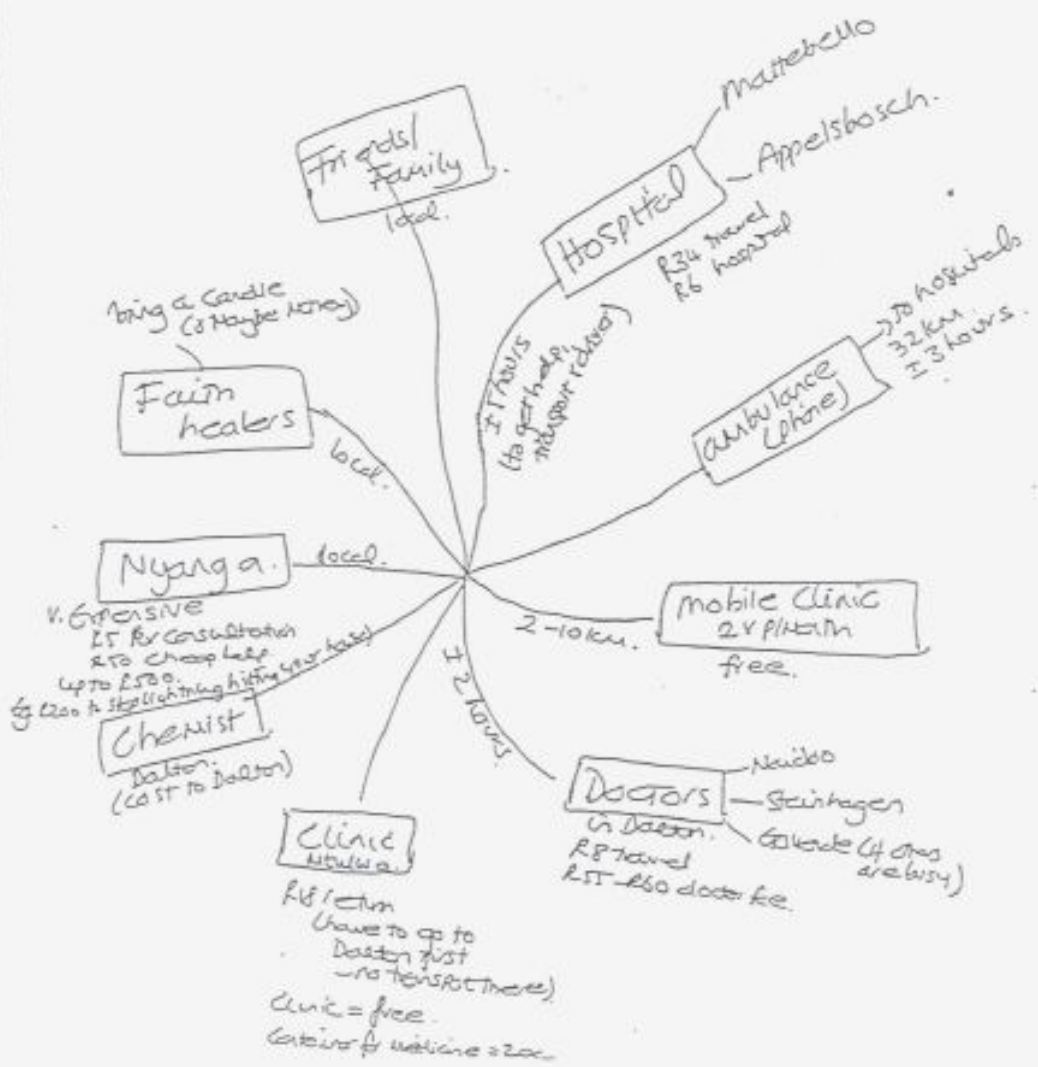

Singh Bahadur Waiba (a Tamang boy, aged 12)

- A map showing the difference between girls' and boys' mobility in an Indian village

Health help for people from Gage.
(Where they go)

PLA Training group
Facilitator: Hailyn

Mobility map showing distance and preferred health service providers

Mood or Life Lines

- Can be done individually or as a group
- People can track how they felt about particular events in their lives or even a programme over time.
- Need to be used sensitively.

SEXUALITY LIFE LINE — MID-1990 39 YEARS

How family members spend time (Masters in Child & Family studies research exercise) This timeline shows how a daughter and son spent their day differently

Key

- Wake up
- Coffee/Tea
- Telephone calls
- watch TV
- reading/studying
- Meeting/School/University
- Sexual Interactions
- Swim
- office work
- Eat with colleagues
- Washing and grooming/Undressing
- on site work
- Interviewing Political Employee
- Eat with family or serve family food
- Sleep/nap rest
- cleaning swimming pool

(Based on Daily activity chart as per PRA Workshop for Sexual Needs Assessments, Sri Lanka, February 1997)

- A lifeline drawn by a student depicting the highs and lows of their life and the important events which influenced them

English tutorial UWC – Huck Finn's river of life

Conclusion

- PLA effective tool in terms of students' and higher educators' knowledge of positioning and resources
- Students have found it useful as methodology themselves
- Enabled safer kind of sharing
- Richer understanding of power relations – privilege and deprivation
- Participatory parity
- Respect for abilities as learners and co-creators of knowledge
- Question world and place in it
- Critical and compassionate worldview
- Skills and willingness for transformation in contemporary SA
- Enhances inquiry based learning approaches

Self-evaluation

- As an individual exercise draw a mood line of the module you are currently teaching or have just completed at UWC indicating the highs and lows of this experience for you.
- Share with one other person.

Matrix ranking – a way to find out about priorities and develop action points

- In your group brainstorm what you see as barriers to student learning at UWC
- Group them into themes
- Draw a matrix and write themes along the left hand side (no more than 6)
- Each group member votes using their counters – explaining their view
- Come to a final decision about what you think are most important
- How could this information be used?

Visioning Exercise

What are the sort of things that would make a satisfactory learning experience at university? Draw or represent the things that you would find conducive to learning at university.

Mapping exercise

- As a group draw a map of the resources that are available for teaching and learning at UWC
- Using your tokens to vote, choose the three things which you would most like to change regarding these resources to improve teaching and learning at the institution
