MSR 2014
Problem Statement

- Web applications are becoming popular over time
  - [Jazayeri et al., FOSE 2007]

- Complex integration of JavaScript, CSS, and HTML

- JavaScript code often experiences errors
  - [Ocariza et al., ISSRE 2011]
Existing Work

- Console Messages
- Bug Reports

No attempt to understand developer’s misconception
Goal

- Understand the common challenges and/or misconceptions among web developers
Background

- Stack Overflow
  - QA website for programmers
  - Started in 2008
  - 4,125,638 questions asked from Jan’09 to Dec’12
  - 500,000+ questions related to web development

- Questions directly asked/answered by developers
  - Followed by discussion in comments
Background

  - QA website for programmers
  - Started in 2008
  - 4,125,638 questions asked from Jan’09 to Dec’12
  - 500,000+ questions related to web development

- Questions directly asked/answered by developers
  - Followed by discussion in comments

StackOverflow provides sufficient data for analysis
Straw man Approach

- Categorization based on tags attached to each question
- Can provide an overview of major topics of discussion
Straw man Approach

- Categorization based on tags attached to each question
- Can provide an overview of major topics of discussion

How appropriate are tags?
Tags

What is known to developer while tagging?
- Platform
- Target Device

What is unknown to developer?
- Possible ways to solve the problem
- Correct topic of discussion
UIWebView intermittently denied access to html5 database storage

I have an iphone app that enables users to login via a native UIView on ios, that then fires up a UIWebView to display the main content. The webapp uses database storage to retain some of the content locally.

However, every now and then, the webapp will fail to load when attempting to access the database with the following message appearing in the logs.

..... sandboxd[3203] : APPNAME(3201) deny file-write-create /Databases.db
Natural Language Analysis

- Analyzing the text provided in the questions and answers provided by developers

Data Collection  |  Data Cleaning  |  Data Processing
Datasets
RQ1: Categorization of topics of discussion
Cross Browser related discussions have gained maximum attention from web developers.

RQ1: Categorization of topics of discussion
RQ2: Hot topics of discussion

<table>
<thead>
<tr>
<th>Technology</th>
<th>Hot Topics</th>
</tr>
</thead>
<tbody>
<tr>
<td>JavaScript</td>
<td>Document Structure, File Handling, Cross-Browser, jQuery, DOM</td>
</tr>
<tr>
<td>HTML5</td>
<td>Media, Browser Support, HTML5 Elements, Canvas API, Offline Web</td>
</tr>
<tr>
<td>CSS</td>
<td>CSS3, Fonts, JavaScript, Box-Model, Layout</td>
</tr>
</tbody>
</table>
RQ2: Hot topics of discussion

View counts provide a hint towards recurrent issues faced by web developers.
RQ3: Temporal trends over time
RQ3: Temporal trends over time

Cross-browser compatibility issues have seen a sharp decline in the recent past.

Further, CSS3 and HTML5 discussions are gaining popularity.
RQ4: Prevalence of web in mobile development

![Graph showing the prevalence of web technologies in mobile development from Jan-Jun 09 to Jul-Dec 12.]
RQ4: Prevalence of web in mobile development

Discussions related to Mobile development are seeing an increasing share of web technologies.

  - Down votes
Popularity

- Questions that gained maximum attention from the community

- Post Score
  - Up votes
  - Down votes

Is post score accurate representation of user participation?
StackOverflow Post Score

- Missing details
  - How many users up voted or down voted the question?
  - How many users tried to answer the question?
  - Is there an accepted answer for this question?
  - How many users are following the question?
  - How many users are participating in the discussion?
StackOverflow Post Score

- Missing details
  - How many users up voted or down voted the question?

We devised a new metric to rank Stack Overflow questions based on these factors.
RQ5: Technical challenges

I'd like to store a JavaScript object in HTML5 `localStorage`, but my object is apparently being converted to a string.

I can store and retrieve primitive JavaScript types and arrays using `localStorage`, but objects don't seem to work. Should they?

I have noticed I am getting a "CSS Explosion". It is becoming difficult for me to decide how to best organize and abstract data within the CSS file.
Programmers get confused about new features, suggesting that the available API resources for these features is far from ideal.

Maintaining web code, such as CSS, is complex without proper tool support.
Implications

- **Finding 1, 3 (Categorization and temporal trends)**
  - *Developers* can shift their focus away from cross browser issues.

- **Finding 4 (Prevalence of mobile applications)**
  - Can guide *tool developers* to build better mobile development tools.

- **Finding 5 (Technical Challenges)**
  - Can guide *standardization communities* to focus on areas that need improvement.
Thank You!!

Contributions

1. Categorized web related discussions.
2. Identified temporal trends.
3. Devised a metric to rank StackOverflow questions.
