**'As a broad-brush survey it looks fascinating.'** – **Andrea Boltho, *Pacific Affairs***

Emerging from ten years of post-bubble recession, the Japanese business and economic system will need to enter a period of radical restructuring in order to return to the growth of former years and maintain its influential position in the development of new technologies. Japan's choices for the future will have a major impact on its global trading partners. In this edited collection of papers, an international range of contributors discuss the fundamental issues faced by the Japanese business and economic system from historical, analytical and empirical perspectives. Their conclusions combine to present a view of the path Japan should take to restore its economy to optimal growth in the 21st century, and show how this path will affect global markets.
