

***Hofagie Laamle* Screening & Discussion** Hosted by **One People One Reef**

[Hawks Peak Productions](#) celebrates the release of [Hofagie Laamle](#) with a local screening and discussion on trailblazing marine conversation in the face of climate change.

Hofagie Laamle brings home the idea of combating climate change in one of the most remote places on earth, the far outer islands of Micronesia. Artfully combining the atmosphere of life on the Ulithi Atoll, the science behind the work of the marine biologists, and the strength of the community, this short documentary by Kelsey Doyle captures severe weather event survival stories from the outer islanders and how in the process of integrating marine biology and tradition can **change the way the western world thinks about coral reef conservation**.

Date: Saturday, December 3, 2016

Time: 6:30 PM - 7:45 PM

Location: COH classroom at Long Marine Laboratory 115 McAllister Way, Santa Cruz, CA 95060. Located downstairs in the Center for Ocean Health Building, across from the Seymour Marine Discovery Center.
