

# 3, 2, 1

## **Your task?**

Write 3 descriptive sentences – Make sure you overview the article/chapter (i.e. Linderoth argues aabbcc that xyzz). “Or In this article, Dorstrom, et al. found that...”

Write 2 analytical sentences (i.e. Burwell & Miller focus on eeffg, however, they assume lmmnn). Or something like: Colletta argues that their most significant finding is eeffg, although the literature more broadly has found aabbcc.” The point here is to analyze and not describe.

Write 1 burning question ABOUT THE ARTICLE, not about the world (i.e. Linderoth deploys a ecological psychological approach to learning from games, what is the role of affordances in his model and in relation to games?)
