

Software Developer Intern, Vancouver, BC

Hootsuite is more than a social media company. We're more than a tech company. We're a collective of creators and makers, builders and hackers, teachers and students.

About our team

The Hootsuite Software Development team practices continuous delivery to ship software to production environments multiple times each day. Our development cycle is fast enabling us to efficiently deliver value to our customers through constant iteration and learning. During your co-op term at Hootsuite, you will pair with a mentor to design, build, test and ship production-ready code. With your team, you will deliver software within the guardrails of a highly automated product development and deployment environment and get to see the results of your efforts working for millions of people around the globe.

Job Description

Working on the Hootsuite Software Development team you will be involved in the software development process from concept to launch, sharing ideas, and seeing your code make an immediate impact.

You will:

- contribute through all phases of an Agile product development cycle, from sprint planning, to daily stand-ups and to retrospectives
- tackle technical problems
- build and test functionality for new product initiatives
- collaborate with peers and receive outstanding mentorship
- learn new technologies
- understand what it means to work on large-scale, highly available web and mobile software products

Who you are:

You are pursuing a degree in Computer Science, Software Development or a related field. You have a passion for building and shipping software products and enjoy working with a team of smart, fun and sometimes quirky people to solve hard problems. You know how

to iterate in an agile fashion to find great solutions, creating hypotheses and testing them with incremental improvements to your code.

You're great at:

- Developing software in one or more modern programming languages (ex. PHP, Java, Ruby, Python, Javascript, Objective-C, Swift...)
- Working with relational databases and are knowledgeable about non-relational databases
- Learning new technologies
- Communicating what you are working on and how things work
- Automating repetitive tasks

Bonus Assets:

- Building and shipping your own personal projects (provide a link to github account or project site)
- Experience developing for mobile devices
- Knowledge of caching technologies like Memcached
- Experience integrating APIs from major social media platforms (Twitter, Facebook, LinkedIn, Google+)
- Familiarity with unit testing frameworks, such as Jasmine and/or PHPUnit
