PROJECTS

Vonnegut a Day - iOS App

Vonnegut a Day sends a daily dose of Mr Kurt Vonnegut Jr's words of wisdom. Features include animations, sharing and notifications. I designed, built and shipped the project. iTunes: itunes.apple.com/us/app/vonnegut-a-day/id1061528991?mt=8

Hug a Tree - Web Application

Hug a Tree allows people to find, hug, tweet and heart the trees of Vancouver, BC. Working in a team of four, my energy was spent creating the models for the database, and designing and building the front-end, using python, bootstrap and custom css in a Django framework. Website: amjensen.pythonanywhere.com/hug

MeetUp - Android App

MeetUp lets the user plot their route (using live data from MapQuest) between university courses, or the route of another student, on a given day. It also determines a mutal break between the user and other student and recommends a location (using live date from Foursquare) where the two can MeetUp.
