

Come prepared for the workshop on July 16th about release engineering.

To prepare, please read:

1. This overview of release engineering: https://en.wikipedia.org/wiki/Release_engineering
2. This article on version control (you're using git). This article is using svn and some of the concepts are different from git (we'll cover those during the workshop), so please ignore the code. <https://betterexplained.com/articles/a-visual-guide-to-version-control/> If you are short on time, please just read up to the section titled "Learn The Lingo".
3. These pages give you a better understanding of what happens after you write code:
 - a. <https://www.geeksforgeeks.org/difference-between-compiled-and-interpreted-language/>
 - b. <https://searchsecurity.techtarget.com/definition/executable>
4. This Wikipedia page on hosting: https://en.wikipedia.org/wiki/Internet_hosting_service

That's all, I hope you have a lovely week!
