

Extreme Weather Events

Ecologies of Harm: Mapping Contexts of Vulnerability in the Time of COVID-19
The University of British Columbia

COVID-19 presents the potential for people and groups to become exposed to harm in new ways. To understand ways in which these harms may be overlapping, we've designed a survey for experiences of extreme weather events affecting people across the world.

This is a citizen / community observation survey, open to anyone **18 years of age and older** who wishes to contribute.

Your descriptions will upload directly to an interactive map of the world that is publicly accessible here: <https://blogs.ubc.ca/ecologiesofharmproject>

Your participation is entirely voluntary, and you do not have to answer every question. If you do wish to participate, you do not need to record your name. Please keep in mind that re-posting, "liking," or "following," will be visible to others on public network platforms.

You may contribute as many observations as you like.
Please share widely.

Link to survey: <https://arcg.is/fv04G0>

This is a digital commons project intended to provide access to research data.

Project Email: Anth.CovidVulnerabilityMap@ubc.ca
