Dear Hiring Manager,

Re: Application to the iXp Intern - Agile Developer - Analytics Cloud position

After reviewing the iXp Intern - Agile Developer - Analytics Cloud position posting at SAP, I respectfully have submitted my resume for your review. With SAP being one of the world's leading producers of software for the management of business processes, it is clear that SAP is committed to developing solutions across the world. SAP's software enables businesses and cooperation's to grow, adapt and profit sustainably. I want to be a part of the impact SAP has in the world and therefore, I believe I would be a perfect fit for the iXP intern – Agile Developer – Analytics Cloud intern role. I want to not only contribute my technical and interpersonal skills that I have learned by my own and in past experiences to help create something meaningful, but also learn and collaborate with others.

I am a detail-oriented, resourceful, and team-oriented individual who applies these qualities to both my professional experiences and personal life. As a self-taught programmer and an individual who continues to learn Computer Science through the BCS program at UBC, I feel I have the drive and passion to match the skills needed to succeed within this role at SAP. Recently, I implemented a Java application that keeps track of user's budgets and their past purchases. This project involved designing a project from the proposal stage, creating user stories and finally implementing these stories using object-oriented principles, design techniques, JSON and JUnit tests. Through this, I was able to gain a deep understanding of how to use Java to build a full working application, develop skills in software design and be able to design a project using test-driven-development. Moreover, I also helped implement a web application with two other individuals where we created a website that showed the latest coronavirus statistics using HTML/CSS/JavaScript/Bootstrap and Django. I worked on the front end and implemented user-facing features and interactive usages of the website. Before this project, I had little to no experience working with any of these technologies. However, I am happy that I was able to learn and quickly pick up many of these new technologies in a short amount of time to complete the front-end of the web application.

As someone who left the medical field to pursue a second degree in Computer Science, I am eager to learn, solve and work with others. I believe my experience of being a more mature, self-taught and motivated individual would allow me to work well and excel in a team with others. By working on a technical project by myself, I have learned how to work independently when I run into problems or need to learn something on my own. Also, by working on a project with others, I have learned how to communicate with others to help debug code and divide up work by assigning each member a task. I am always willing to learn and collaborate with others because I know that the team's success is mine as well.

I appreciate your time and consideration. If you have any questions regarding my resume or would like additional information, please feel free to contact me. I look forward to hearing from you.

Best regards,
Ali Hasan
