

# ① ANGLES IN STANDARD POSITION

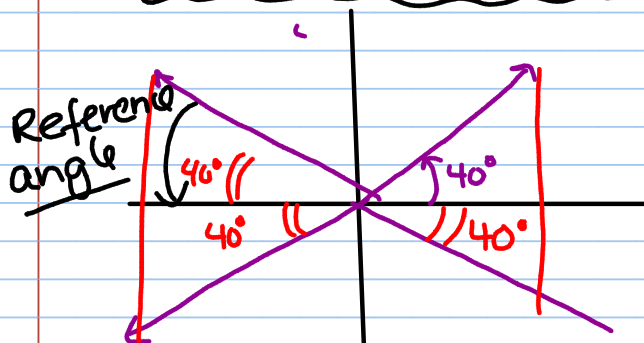

- Initial arm or ray II is always the positive x-axis
- VERTEX is always at the origin or  $(0,0)$
- the Terminal arm or ray can be anywhere
- The ANGLE is the III distance between the initial arm (x-axis) & the terminal arm

## Examples Angle in S.P. → y or N

## ② Reference Angles (Bowtie Angles)

• The **Reference Angle** is the angle between the terminal arm and the closest x-axis.

$$\sin 50 = .766$$

$$\sin 130 = .766$$

$$\sin 230 = -.766$$

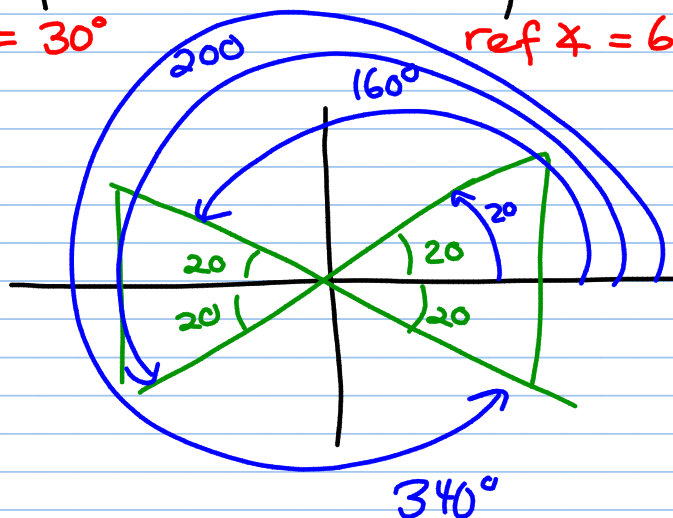

$$\sin 310 = -.766$$

$$\text{ref } \angle = 30^\circ$$

$$\text{ref } \angle = 60^\circ$$

### ③ Coterminal $\angle$ 's

$$390^\circ \quad (360 + 30)$$

$$750^\circ \quad (360 + 360 + 30)$$

$$\sin 30 = .5$$

$$\sin 390 = .5$$

$$\sin 750 = .5$$

Angles that share the same terminal arm but are "full circles" apart are called COTERMINAL

Next coterminal  $\angle$ :

$$150 + 360 = \underline{\underline{510^\circ}}$$

$$\text{OR } -210^\circ$$

④ Special Δ's ← are used to get EXACT values for trig th's

 We like EXACT answers.

<u>Math</u>	<u>Science</u>
$\frac{1}{3}$	.33
$\sqrt{2}$	1.41
$\pi$	3.14

①

Equilateral Δ

$$\begin{aligned} x^2 + 1^2 &= 2^2 \\ x^2 + 1 &= 4 \\ x^2 &= 3 \\ x &= \sqrt{3} \end{aligned}$$

Exact value:

$$\sin 60^\circ = \frac{\sqrt{3}}{2}$$

$$\begin{aligned} \sin 10^\circ &= \cos 80^\circ \\ \sin 22^\circ &= \cos 68^\circ \end{aligned}$$

$$\begin{aligned} \sin 30^\circ &= \frac{1}{2} & \sin 60^\circ &= \frac{\sqrt{3}}{2} \\ \cos 30^\circ &= \frac{\sqrt{3}}{2} & \cos 60^\circ &= \frac{1}{2} \\ \tan 30^\circ &= \frac{1}{\sqrt{3}} & \tan 60^\circ &= \frac{\sqrt{3}}{1} \text{ or } \sqrt{3} \end{aligned}$$

②

$$\begin{aligned} \sin 45^\circ &= \frac{1}{\sqrt{2}} \\ \cos 45^\circ &= \frac{1}{\sqrt{2}} \\ \tan 45^\circ &= \frac{1}{1} \end{aligned}$$
