RE: Data Scientist Intern

Please consider my application for the student internship Data Scientist position at your Toronto location, as advertised on December 7th on the Amazon Careers Page

I am currently in my third year as a second-degree student studying Computer Science at the University of British Columbia and I expect to graduate in May 2020. I have developed a strong interest in the field of Data Analysis ever since I started my first degree in Economics. My interest in Data Science is the reason why I choose to come back to school to complete a degree in Computer Science. After attending an Amazon workshop at UBC, I was informed that this position will be made available for interested applicants on Amazon Career web page.

As an experienced professional and second-degree student, I am experienced in both collaborative and independent projects. Throughout my professional working time at GoldLion Cement Manufacturing Ltd, I developed several data analysis programs to assist the factory with production planning. Specifically, by incorporating the quarterly sales data with the production cost data, I was able to design a program to more accurately reflect production cost to help the factory avoid unnecessary expenses.

Currently, I am seeking opportunities to use my data analysis skills and experience to contribute to the next innovative data science project. I am aware of the effort, attention, and problem-solving skills required to succeed as a Data Scientist, and I am confident that my ability to learn and adapt quickly will help me to become an asset of the Amazon Data Science team.

Enclosed is my resume that more detail about my background and work experience.
If my qualification meets your needs, please contact me by phone at 604-518-7152 or email at kyo.tang@alumni.ubc.ca.

Thank you in advance for your time and consideration. I look forward to hearing from you soon.

Sincerely,

Kyo Tang
