Vancouver, BC V6C 1S4

Dear Ms. Wong,

Please consider my application for a software developer co-op position at your Winnipeg branch as advertised both in your website and UBC Science Co-op site. Currently, I am a third-year student who will be graduating from UBC in May 2019 with Bachelor of Science Degree majoring in Mathematics. As a math major student, I have taken a lot of intensive math, stats, and computer science courses that allow me to build my critical thinking and programming skills. I believe that my academic knowledge and experience can make a great contribution to your team.

As stated in my enclosed resume, I had the opportunity to work for Langara College's Mathematics and Statistics Department as a marker and basic tutor. While both positions required me to be detail-oriented and punctual, my experience as a tutor also contributed to improve my communication and teamwork skills.

In addition to my work experience, I have accumulated a knowledge in object-oriented programming and, Black Box, White Box, jUnit Testing using Java language through Computer Science courses that I took in both Langara College and UBC. I am also comfortable with using R and MATLAB to write code for statistical and/or mathematical computational purpose. As a focused and quick-witted individual, my work ethic will certainly be valuable to your company.

Your company's culture that respects people interaction with companies and the professionalism you require of your employees encourage me to apply for the position. I appreciate the time you've taken to review my application and I am looking forward to the opportunity to meet you for an interview. If my background meets your need, please do not hesitate to contact me through my phone: 778 316 8611 or email at: lani.diana09@gmail.com.

Best regards,

Lani Diana
