

Food: Sustainability and Innovation Series

Our farming systems have significant environmental and social impact both locally and globally. Join us at TELUS World of Science to discuss the range of options and how we can work together to develop a more sustainable future. National and international panelists with a range of expertise will join us to stimulate the conversation. Each session will offer attendees an opportunity to engage with the speakers through question and answer sessions and specially designed interactive tools. Come and contribute to this important discussion.

Panelists include local organic farmers, Randy Shore, Vancouver Sun; Donald Nkrumah, Bill and Melinda Gates Foundation and Alison Van Eenennaam, UC Davis, California.

Environmental Farming Footprint and Climate Change

Tuesday, April 12th, 5:30 – 7:00pm

Food Security and Sustainability: BC and Beyond

Tuesday, April 19th, 5:30 – 7:00pm
