The controversial approval of the Site C dam project by the NDP government won support from business and labour interests even as it was condemned by environmentalists and First Nations. To help sort through the issues involved, this forum brings together three experts, all of whom have offered policy advice on Site C, to provide perspective on the decision.

**Mark Jaccard** (Simon Fraser University) is a leader in the design and application of energy-economy models that assess the effectiveness of sustainable energy and climate policies.

**Karen Bakker** (University of British Columbia), was named one of Canada's "top 40 under 40" in 2011. She is Director of UBC's Program on Water Governance and a leading expert in sustainable water governance.

**Gordon Christie** (Director of the Indigenous Legal Studies Program at the Peter A. Allard School of Law, UBC) will discuss why all Canadians should be thinking about how Canadian governments manage Treaty 8 territory (which includes Site C), and how historic treaties should function in the modern world.
