

## Want to get out of the lab? We're looking for volunteers!

**What:** The Marine Connections project is one of the most fun events we have! We work with Dr. Sigal Balshine from McMaster University (<https://abel.mcmaster.ca/>) to teach Surrey high schoolers how to do real biological assessments on the Midshipman Fish right here in Delta! Together with her team, you'll get to spend the day out on the beach with these amazing fish, getting to know Sigal and change the life of some super keen kids. **Training is provided!**

**Why:** Science is important and super cool! We want to show these kids just how fun it can be. Most high school kids have no idea what being a biologist is like, we want to show them!

**Who:** We're looking for volunteers with an interest in biology and science outreach! Zoology experience is great, but not necessary.

**Where:** We will start from the two Secondary Schools in Surrey, and bus out to Crescent Beach in Delta, then head back to the schools. There is an optional additional day in the secondary school as well. **Transport and food will be covered!**

**When:** The day on the beach is **May 30<sup>th</sup> 9am to 4pm**, and the optional school day is **May 29<sup>th</sup> 9am to 4pm**. The Training session is **May 22**.
