

Faculty of Land and Food Systems

APBI 360

Food & Environment (Agroecology) 2:

Animals and Plants as Components of Agricultural Ecosystems. This course in agroecology uses a systems approach to investigate the functions and interactions of plants and animals in agricultural systems. Topics include a discussion of insect pest-predator relations in example berry crops, and the impact of wildlife on growing food & the impact of growing food on wildlife.

2014 Term 2: T & Th 1-4 pm
