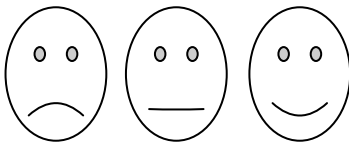

Mapping Online Lesson Self Assessment

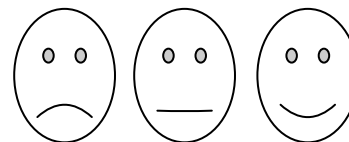

I found a route for Sarah to follow that used all of the addresses in the problem.

The route that I mapped for Sarah would be the shortest path for her to take.

I completely explained the route so that my teacher and classmates could follow my thinking.

I used my time well during the lesson to solve the problem.

What did I do well while solving Sarah's problem?

What would I do differently next time to solve a similar problem?
