

Summer Student at the Lockwood Laboratory

Hi all,

Please see the message below from Fraser Johnson, a former student in the BSc Pharmacology program and current graduate student in the Lockwood lab at BC Cancer regarding summer research opportunities. They do amazing work out there, and you will receive good mentorship throughout the term if you are interested in exploring research as a career opportunity.

AH

The Lockwood lab at the BC Cancer Research Centre is looking to fill two research positions for summer 2021. We're accepting 3rd or 4th year undergraduate applicants for a summer student position (4 months) or co-op (4-8 months). Our lab has open projects related to lung cancer biology & cell signaling, therapeutic resistance in lung cancer etc. Pharmacology students would be well-suited for our lab because all of our projects apply the use of therapeutics to study the mechanisms of lung cancer.

Attached is the abstract & poster our previous pharmacology program co-op student submitted to last year's BC Cancer Summit—she was selected for a quick talk at the conference and was awarded a prize for her presentation. We'd like interested students to send a transcript and CV to William Lockwood at wlockwood@bccrc.ca and cc myself at fjohnson@bccrc.ca by Monday, January 4th. We'll work with students to apply for studentship funding and the application deadlines begin in mid-February—past students have been successful in these competitions and this has benefited our lab as well as our trainees.

Our current pharmacology program co-op student Georgia (*edit: who you will also know from the Piazza discussion boards!*) has offered to provide a reference for our lab—which is always a good idea for interested applicants to look into. She's made herself available to be contacted at georgiaderappard@gmail.com for any students who might be interested.

Fraser Johnson, B.Sc. (Hons)
