To Whom It May Concern,

I am writing to express my interest for the position of a junior cloud developer on your team. I believe I am a strong candidate for this position as I have completed two co-op terms, experience with javascript and cloud technologies.

I have completed eight months of coop at Collabware as a junior software engineer. My duties included building external and internal console applications. I was able to quickly learn c# and completed some of my projects such the automated content configuration application one week ahead of schedule. I attended daily scrum meetings, weekly sprint planning and retrospective meetings with the team.

My experience with javascript is demonstrated in academic and personal projects. In the advanced software engineering course I am enrolled in, my group is using the javascript framework react native to build an iOS app on exchanging contact information with nearby users. As seen on my resume, I have built a web app called Collaber using the Meteor and React frameworks in a group of four at a hackathon. I designed and implemented the database.

Outside of school, I am also active in the technology community. I attend regular technical meetups such as the Vancouver Meteor meetups and React meetups to learn more about the latest technologies. In addition, I am also one of the Microsoft student partners at UBC. I encourage students to use Microsoft's Azure platform and help organize technical events such as the Azure resume event.

I believe my experience and work ethics will make me a positive addition to your team. Please contact me at miss.lisa19@alumni.ubc.ca if you are interested in interviewing me.

Sincerely,

A handwritten signature in black ink, appearing to read 'Lisa Wong', with a stylized, cursive script.
