

# Advances in Forest Pathology

FRST 506.201 (also listed as FRST 449C)

*Schedule and room TBA*

## Course Outline – January 2014

Forest diseases are among the most important disturbance agents in natural and planted forests.

This course will help develop a deeper understanding of the causes of forest disease epidemics and the convergence of factors that result in epidemic development.

We will study the various management avenues available and assess the success and failure of past and present control approaches.

**Instructor Dr. Richard Hamelin**

3032 Forest Sciences Centre
