Dear Hiring Manager,

      I am greatly honored to apply for an Arista software engineering co-op or new grad opportunity. My grit, desire, and passion for creating and developing exceptionally great code and software will prove to be invaluable to the team.

I've been involved in various coding projects in both school and in my own time. For multiple projects, I've helped oversee each phase in the software development life cycle, including planning, design, implementation, and testing. I developed software and testing for a key client - My Practice Matters, the creators of the open-sourced software OpenDental - in a real-world class project. In class, I also helped develop and test an android app which utilizes APIs from various sources. I also have a number of other projects and written works published online.

I can also contribute vastly to the working culture as a good fit for the organization. I bring a positive and relaxed, yet determined, attitude to the table. I grew immensely as a programmer during my starting years as a computer science student due to the vigilant mentorship of my peers and instructors. Hence, I'm always one to help others in need or who face tough challenges.

I'm thrilled at the opportunity you've provided and I appreciate your consideration. I keenly look forward to an opportunity to discuss how much more value I can add to Arista.

Best regards,

Roberto Trigo
