Dr. Gregg Morin
Head of Proteomics
Genome Sciences Center, BC Cancer Agency
Vancouver, BC V5Z 1L3

Dear Dr. Gregg Morin:

Please consider my application for a research assistant position at your proteomics core facility in the Genome Sciences Center, as advertised on July 9 on Indeed.com. I will graduate from the University of British Columbia in August 2015 with a Bachelor of Science degree in Biochemistry.

As you can see from my enclosed résumé, I have learned all the standard protocols used in the generation of proteomic samples throughout my degree. I have also learned to design and execute experiments independently and present data to a wide range of audiences. This experience and education has given me a practical understanding of the application of scientific techniques.

As an aspiring researcher, I'm well aware of the effort, time-management, organization, and coordination that is required to run a research laboratory. Moreover, my many years of experience as a volunteer team leader would be an asset to your group's collaboration on various projects. This leadership experience will help to initiate excellent communication and discussion bases with all members of the team.

I have worked hard to improve my research and technical writing skills. My experience, education, and personality have prepared me to work well with others and to respond positively to challenges, problems, and added responsibilities.

Thank you for considering my application. If my background meets your needs, please phone anytime at (604) 832-9012 or email at ruhanigrewal@hotmail.com.

Sincerely,

Ruhani N. Grewal

Encl. Résumé
