

# imaginative education

# Presentation Outline

- **Introduction and Overview of Imaginative Education**
- **The Theoretical Foundations of Imaginative Education**
- **Imaginative Education in Action**

# Introduction

## ❖ What is new about IE?

- a new understanding of how knowledge grows in the mind, and how our imaginations work and change during our lives
- innovative teaching methods based on these insights offer new ways of planning and teaching

## ❖ So what is the imagination?

- ability to think of the possible, not just the actual
- source of invention, novelty, and flexibility in human thinking that greatly enriches rational thinking
- tied to our ability to form images and our emotions
- “reaching out” feature of minds that picks up new ideas, tries them out, weighs their qualities and possibilities, and finds a place for them amidst the things already learned: “Look! See what I can do with this!”

# Overview – Initial Questions

## ❖ What are the theoretical foundations for IE?

- Socio-cultural theories of Lev Vygotsky
  - richest elaboration of Vygotsky's ideas about learning and imagination developed for education
- Cultural Recapitulation Theory
  - thinking tools (cognitive tools) that were invented in cultural history are recapitulated
  - best described in Kieran Egan's *The Educated Mind: How cognitive tools shape our understanding*

*"A new theory of education that is (believe it or not) useful... 'The Educated Mind' is something very new and different."*

**-- C. J. Driver, The New York Times Book Review**

*"Kieran Egan has one of the most original, penetrating, and capacious minds in education today. This book provides the best introduction to his important body of work."*

**-- Howard Gardner, Harvard University**

# **Overview of Imaginative Education**

**Kinds of Understanding: The Core of Imaginative Education**

**Cognitive Tools: How We Can Develop the Five Kinds of Understanding**

# Kinds of Understanding: The Core of Imaginative Education

# Kinds of Understanding

## ❖ IE is based on five distinctive kinds of understanding that enable people to make sense of the world in different ways

- enable each student to develop these five kinds of understanding while they are learning math, science, social studies, and all other subjects
- needs to be accomplished in a certain order because each kind of understanding represents an increasingly complex way that we learn to use language
  - Somatic Understanding (pre-linguistic)
  - Mythic Understanding (oral language)
  - Romantic Understanding (written language)
  - Philosophic Understanding (theoretic use of language)
  - Ironical Understanding (reflexive use of language)

# Kinds of Understanding:

- ❖ all five kinds of understanding make a distinctive contribution to one's understanding and they work best if they can be combined
  - Somatic + Mythic + Romantic + Philosophic + Ironic
- ❖ each kind of understanding does not “naturally” develop at a particular age in some steady and inevitable process
  - occurs when the appropriate forms of IE are used adequately
  - teachers can focus their efforts on engaging students' imaginations and emotions with knowledge about the world and on developing their use of an array of... cognitive tools

# Somatic Understanding

## ❖ understand experience in a physical, pre-linguistic way

- make sense of experiences through the information provided by the senses of sight, hearing, touch, taste, and smell, and crucially with the emotions that these are tied up with
- experience the world and sensations of balance, movement, tension, pain, pleasure, and so on, through the way the body physically relates to the objects and persons encountered

# Mythic Understanding

## ❖ understand experience through oral language

- no longer limited to making sense of the world through direct physical experience
- can now rely on language to discuss, represent, and understand even things not experienced in person

# Romantic Understanding

## ❖ understand experience through written language

- realization of independence and separateness from a world that appears increasingly complex
- relate readily to extremes of reality, associate with heroes, and seek to make sense of the world in human terms

# Philosophic Understanding

- ❖ **understand experience through the theoretic use of language**
  - systematic understanding - more focus on the connections among things
  - recognition that there are laws and theories that can bring together, and help make sense of, what originally seemed to be disconnected details and experiences

# **Irony Understanding**

- ❖ **understand experience through the reflexive use of language**
  - realization of the limits to systematic thinking
  - appreciation that theories, and even language, are too limited and crude to capture everything that is important about the world
  - recognition that the way we make sense of the world depends on our unique historical and cultural perspective

# **Cognitive Tools: How We Can Develop The Five Kinds Of Understanding**

# Cognitive Tools

## ❖ students can most successfully develop the five kinds of understanding by acquiring sets of cognitive tools

- “thinking tools” invented and developed by our ancestors for making sense of the world and acting more effectively within it
  - stories – helped people to remember things by making knowledge more engaging
  - metaphors – enabled people to understand one thing by seeing it in terms of another
  - binary oppositions like good/bad – helped people to organize and categorize knowledge
- referred to as tools because they are mental devices that help us think and do things more effectively

# Cognitive Tools

## ❖ **these cognitive tools, and many others, have become a part of our culture**

- hard to imagine life without basic cognitive tools such as stories or metaphors
- each of us can learn to use these cognitive tools to enlarge our powers to think and understand

## ❖ **most teachers will intuitively recognize the importance of many cognitive tools**

- teachers may be less familiar with how to routinely use them in the classroom
- IE shows how cognitive tools can be effectively used to make everyday teaching more interesting and meaningful while also developing the kinds of understanding

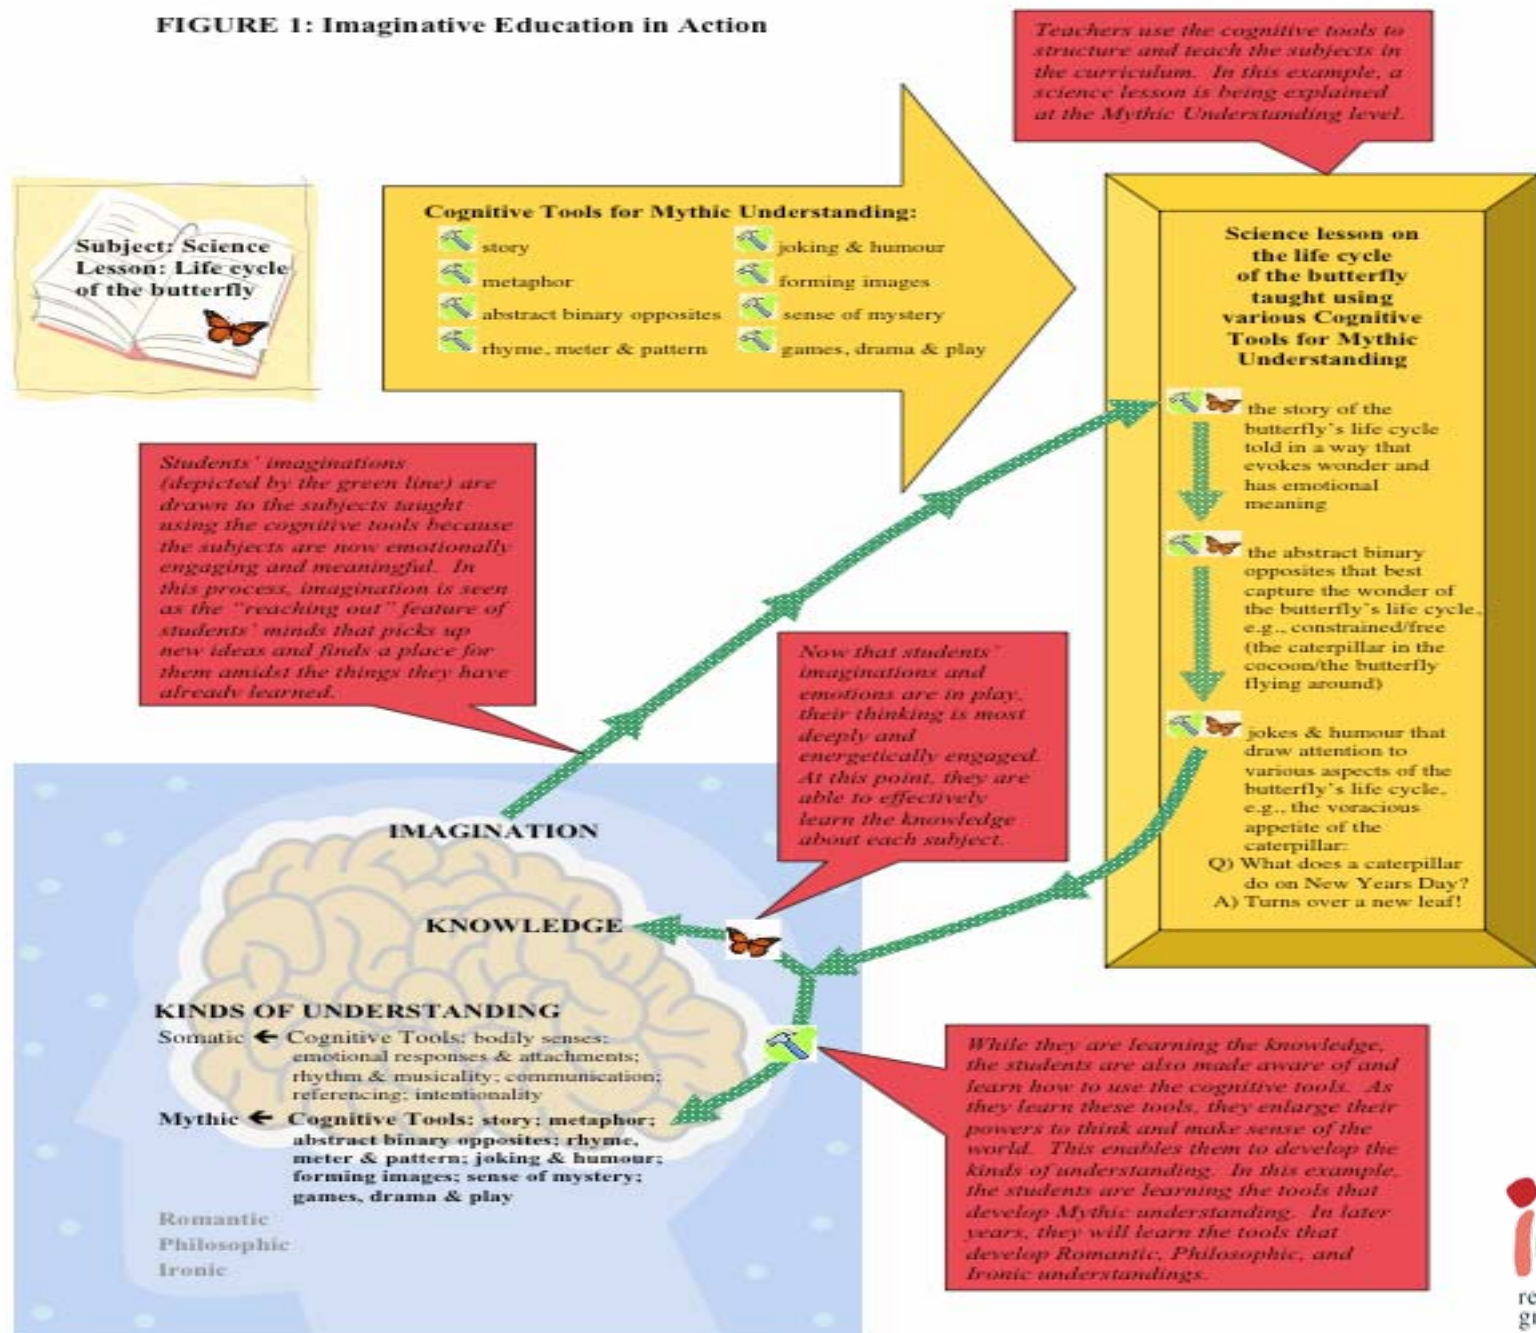

# Cognitive Tools

Somatic Understanding	Mythic Understanding	Romantic Understanding	Philosophic Understanding	Ironie Understanding
bodily senses emotional responses & attachments rhythm & musicality gesture & communication referencing intentionality	story metaphor abstract binary opposites rhyme, meter, & pattern joking & humour forming images sense of mystery games, drama & play	sense of reality extremes & limits of reality association with heroes wonder humanizing of meaning collections & hobbies revolt & idealism context change	drive for generality processes lure of certainty general schemes & anomalies flexibility of theory search for authority & truth	limits of theory reflexivity & identity coalescence particularity radical epistemic doubt

**The sets of Cognitive Tools students should acquire to develop each Kind of Understanding**

# PLANNING FRAMEWORKS

1. **Brief version of the Mythic Framework**
2. **Brief version of the Romantic Framework**
3. **Brief version of the Philosophic Framework**

# Planning Frameworks

## Mythic Planning Framework

### 1. Locating importance

### 2. Thinking about the content in story form

- 2.1. Finding binary opposites
- 2.2. Finding images, metaphors and drama
- 2.3. Structuring the body of the lesson or unit

### 3. Conclusion

### 4. Evaluation

## **Romantic Planning Framework**

- 1. Identifying transcendent qualities**
- 2. Organizing the content into a narrative structure**
  - 2.1 Initial access
  - 2.2 Structuring the body of the unit or lesson
  - 2.3 Humanizing the content
  - 2.4 Pursuing details
- 3. Conclusion**
- 4. Evaluating**

## Philosophic Planning Framework

1. Identifying powerful underlying ideas
2. Organizing the content into a theoretic structure
  - 2.1. Initial access
  - 2.2. Organizing the body of the lesson or unit
3. Introducing anomalies to the theory
4. Presenting alternative general theories
5. Encouraging development of the students' sense of agency
6. Conclusion
7. Evaluation
