Érudit*

**For a professional and credible  
alternative to commercial publishers**

# *Four Dimensions*

---

1. Who are we ?  
Short presentation of Érudit
2. A specialized aggregator  
of SSH journals
3. What's next:  
Development of the book collection
4. Érudit's approach

**Who are we ?**

**Short presentation of Érudit**

*Since 1998*

**é**rudit

Promoting and disseminating **research**

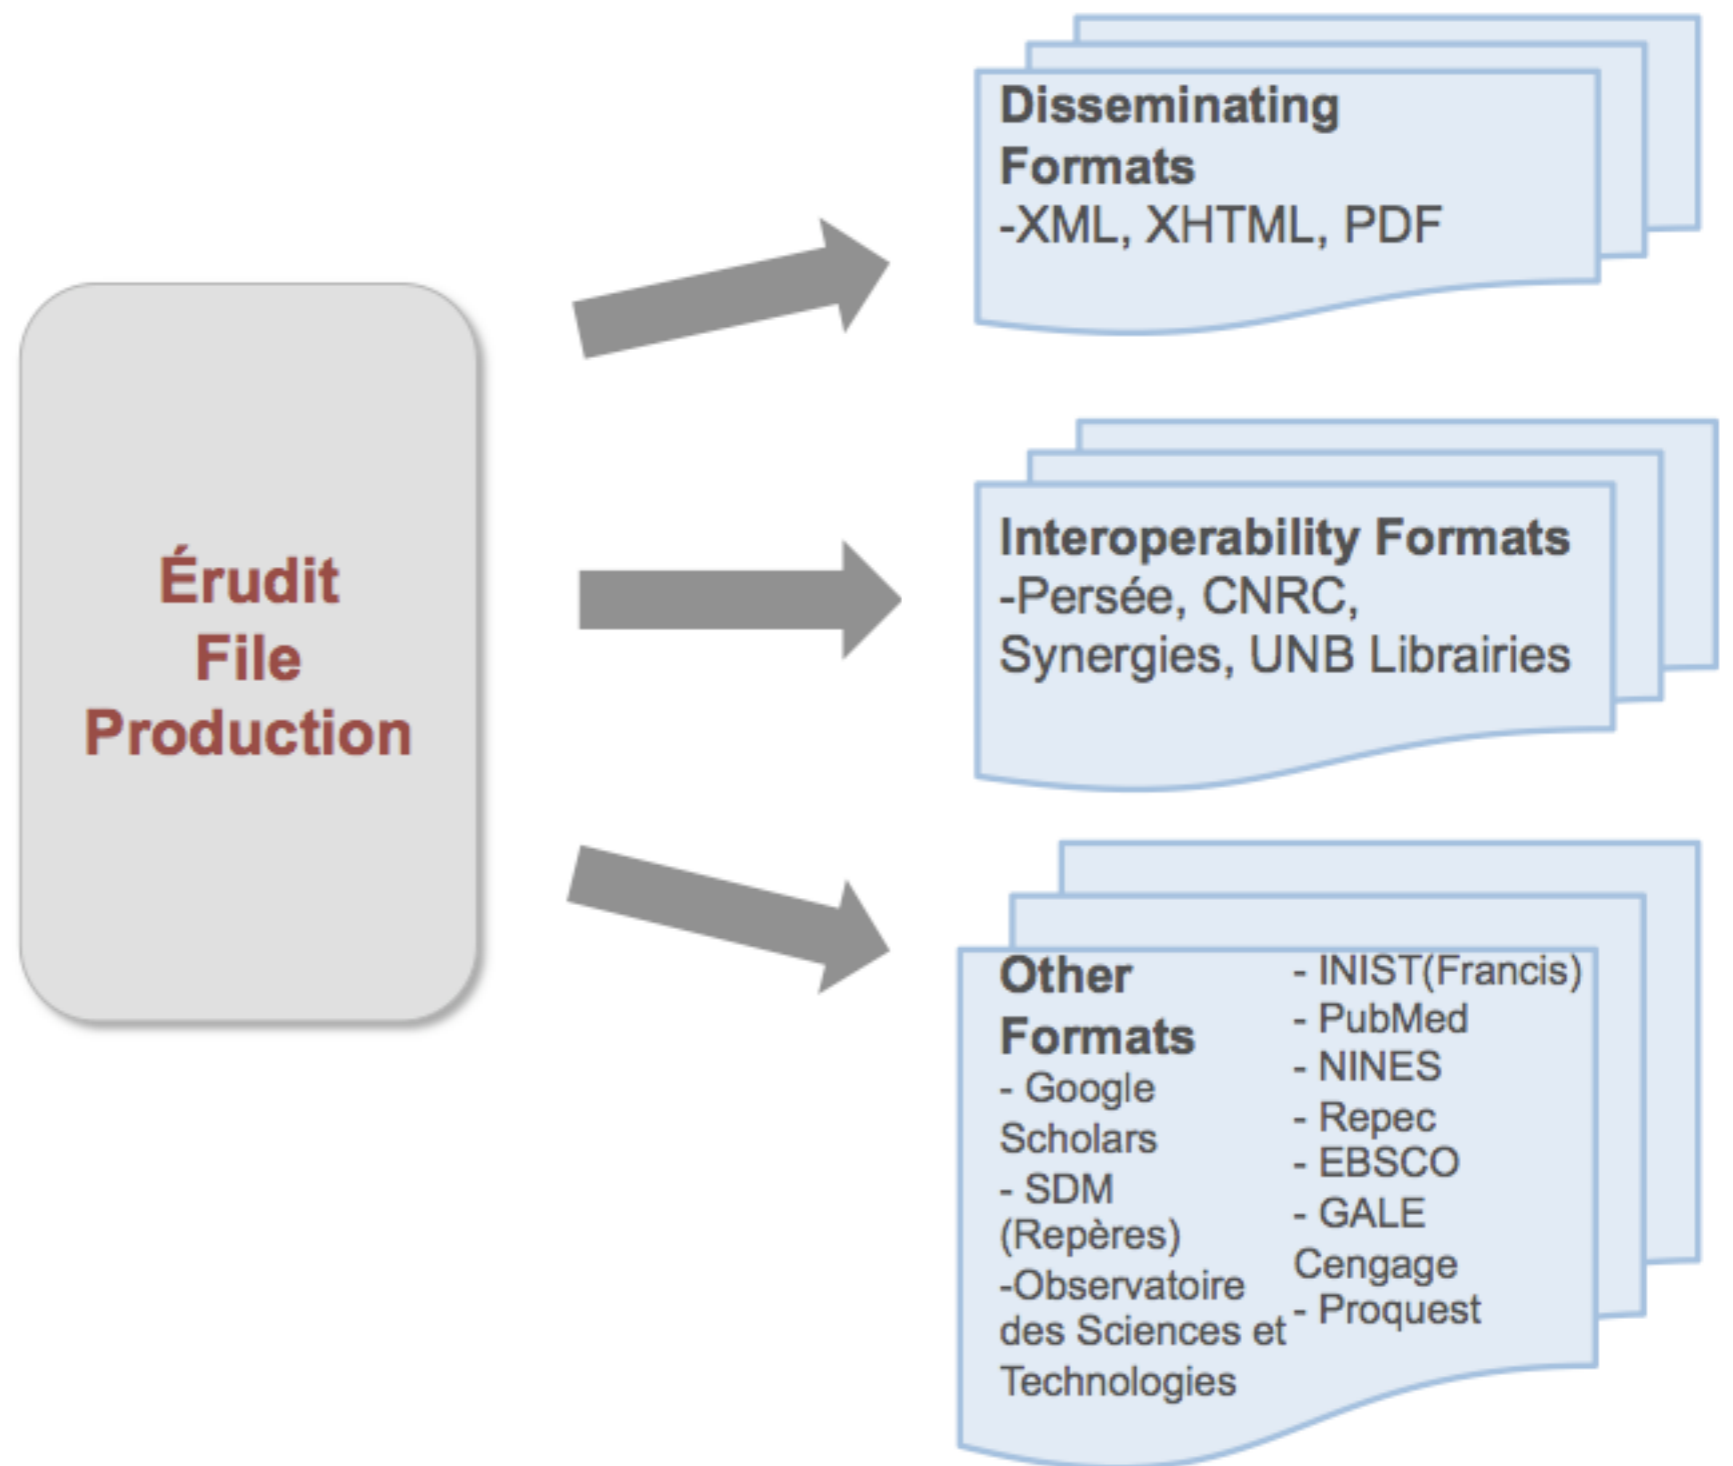

*Commitment to the dissemination of  
scholarly publications, especially in  
social sciences and humanities (SSH)*

## *Production, dissemination and preservation services in Érudit*

- Professional and technical staff specialized in digital publishing services (at low cost)
- High standards and norms for digital publishing (XML, XHTML, TIFF, SVG, OAI-PMH, Z39.50, NLM XML, Exodic, MARC, COUNTER, RSS, OpenURL)
- Hosting and security, Web interface, Search engine
- Highly structured metadata for all collection
- Dissemination strategy
- Long-term Preservation
- Subscription management

# *Highly structured metadata and dissemination*

Theses

Documents  
and Data

## Different types of document

- 63 400 articles, 74 journals (+ 11 UNB), 34 journals completely digitized, 142 current issues yearly published
- 17 books, more to come in next future
- more than 21,000 theses
- 2665 documents in the Repository (32 research units)
- Soon (new): 31 cultural magazines completely digitized

*An infrastructure owned and at the service of the scholar community*

---

- A multi-institutional consortium of research universities (Université de Montréal, Université Laval and Université du Québec à Montréal)
- Make possible an economic sustainable model for not-for-profit scholarly publishers

# *Érudit gives high visibility to publications in SSH*

---

- Consultation statistics per month
  - more than 1.3 million documents consulted (pages views-AWStats)
  - and more than 210,000 visitors
- Subscriptions from consortia (Canada, Québec, France, Taiwan, etc.) and individuals
- With relatively few resources, Érudit has already reached remarkable results
- Érudit has succeeded where traditional print publishing has failed

**A specialized aggregator  
of SSH journals**

# *We work with not-for-profit publishers*

---

- One segment of the marketplace and a type of practices
- Significant position within the field of major journals in general
- Dominant position within national communication structures
- “Responsible publishers”  $\Rightarrow$  recovery of costs
- Examples: Learned societies, Research centers, Universities, «Professional» associations, University Presses, small independant publishers

## *Public good perspective*

---

- Journals and other scholarly documents have to be considered as Public Good by institutions, government administrators and funding agencies – this is real democratization of knowledge
- Independent scholarly journals are by essence non-for-profit
- When journals are subscription based, it is by necessity: they need revenues to cover part of their production and dissemination expenses

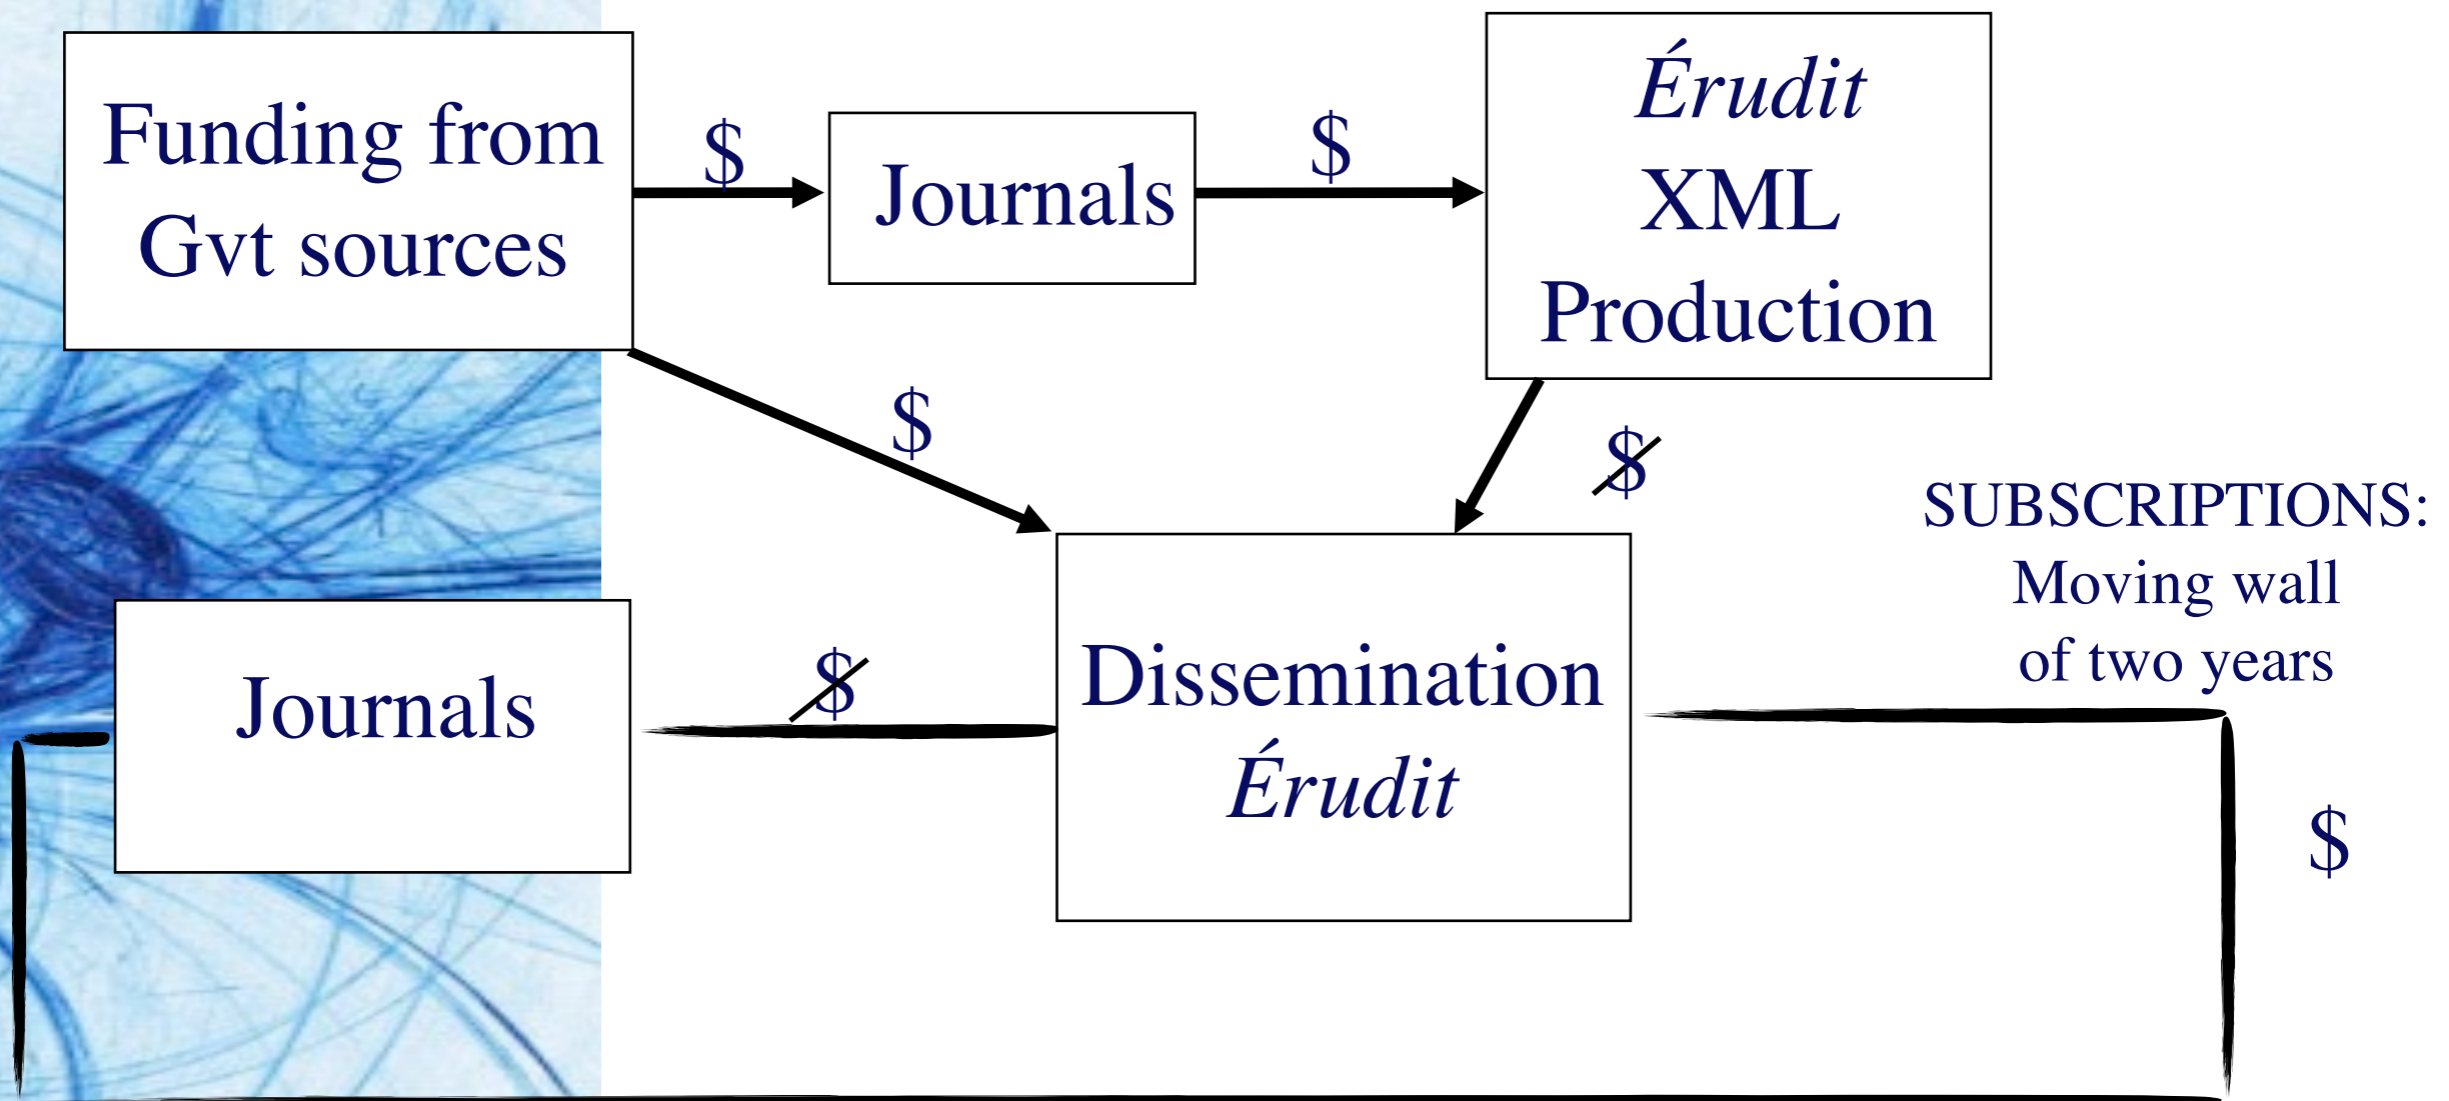

# *Economic choices for journals*

---

- Érudit acknowledges the journal's needs for revenues, while advocating and lobbying for full public and open access.
- Érudit adheres to the concept of fair publishing, while promoting the goal for open access
- The consensus with journal's editors is: full free access or a two years moving wall

# *Economic Model: public funding and sales revenues*

*As much Open Access  
as we collectively can afford*

---

- Then: 90% of the journal articles collection in Érudit are open access
- Subscription revenues go to journal editors
- Books (until now) and proceedings, the repository and theses are full free access

**What's next:  
Development of the book  
collection**

## *A new trend*

---

- After journals, library acquisition of ebooks is on the agenda ➡ *HighWire Press* survey results

• [http://highwire.stanford.edu/PR/PR\\_HWeBookSurveyResults\\_4Mar10.pdf](http://highwire.stanford.edu/PR/PR_HWeBookSurveyResults_4Mar10.pdf)

- Librarians predict a rapid growth of ebooks acquisition and library budgets for ebooks are growing

## *Most important findings*

---

- “Users tend to discover ebooks through both the library catalogue and search engines
- While users prefer PDFs, format preference will likely change as technology changes
- DRM seems to hinder ebook use for library patrons; ability to print is essential
- The most popular business model for librarians is purchase with perpetual access”

*“Make a move or stay there”*

*“Déménager ou rester là”*

### The new digital paradigm

- New devices and services become necessity (Internet, iPod, PDA, laptop computers, etc.)
- Coexistence of two environments

### Period of transition

- The choice “stay there” can be made, but while also admitting the existence of a general trend
- “Make a move” engages in a transition, a process of hybridization. *Tabula rasa* would not be good advice in those matters.

# *One content (text), but multiple “materialities”*

---

- The digital does not make the book immaterial. The digital is physical and real
- A text has to take many forms of materialization to meet its readers
- The reader (or the librarian) chooses the relation(s) he/she needs with the text
  - Print (Hardcover, Paperback)
  - Audio (iPod/MP3, Smart phone, CD-ROM/DVD-ROM)
  - Digital (Personal computer, Smart phone, E-book device)

# Forms of materialization (1)

---

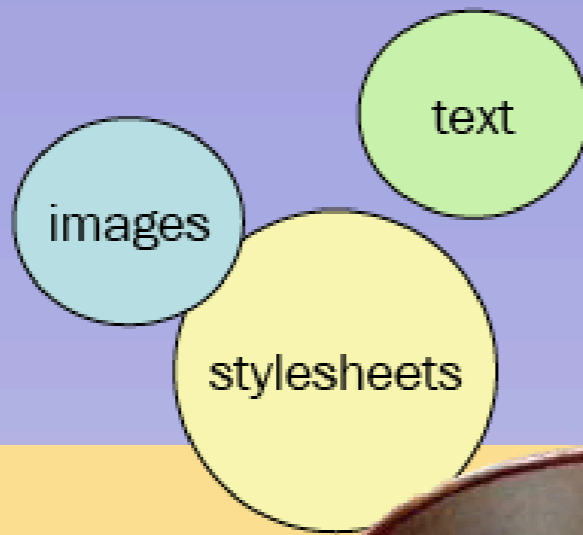

- E-book (digital book): the content in electronic format (PDF, XML, ePub).
- Challenge for all encoding formats
  - Produce ALL media
  - Long term preservation
  - Interoperability, multiple platforms
  - Adaptable to all types of screens (*reflowable text*)
- E-book device (e-book reader): a device to read e-books (eReader from Sony, iLiad from iRex, or iPad from Apple)

## *Forms of materialization (2)*

- Reading software: Display the content of e-books encoded in one or different formats (+ reading aid functions)
  - Acrobat (PDF)
  - FireFox, Explorer (HTML, XHTML, XML)
  - iPad (PDF, ?)
  - Sony Reader (eReader, ePub, PDF/SONY)
- Metadata: “data on data” to describe a documentary unit, aside its media
  - Contain: title, author, publisher, rights, language, genre, isbn, etc.
  - Examples: ONIX, Dublin Core.

*...to*

metadata

rights information

<XML composition

The "book" as an abstract resource

## *Main issues*

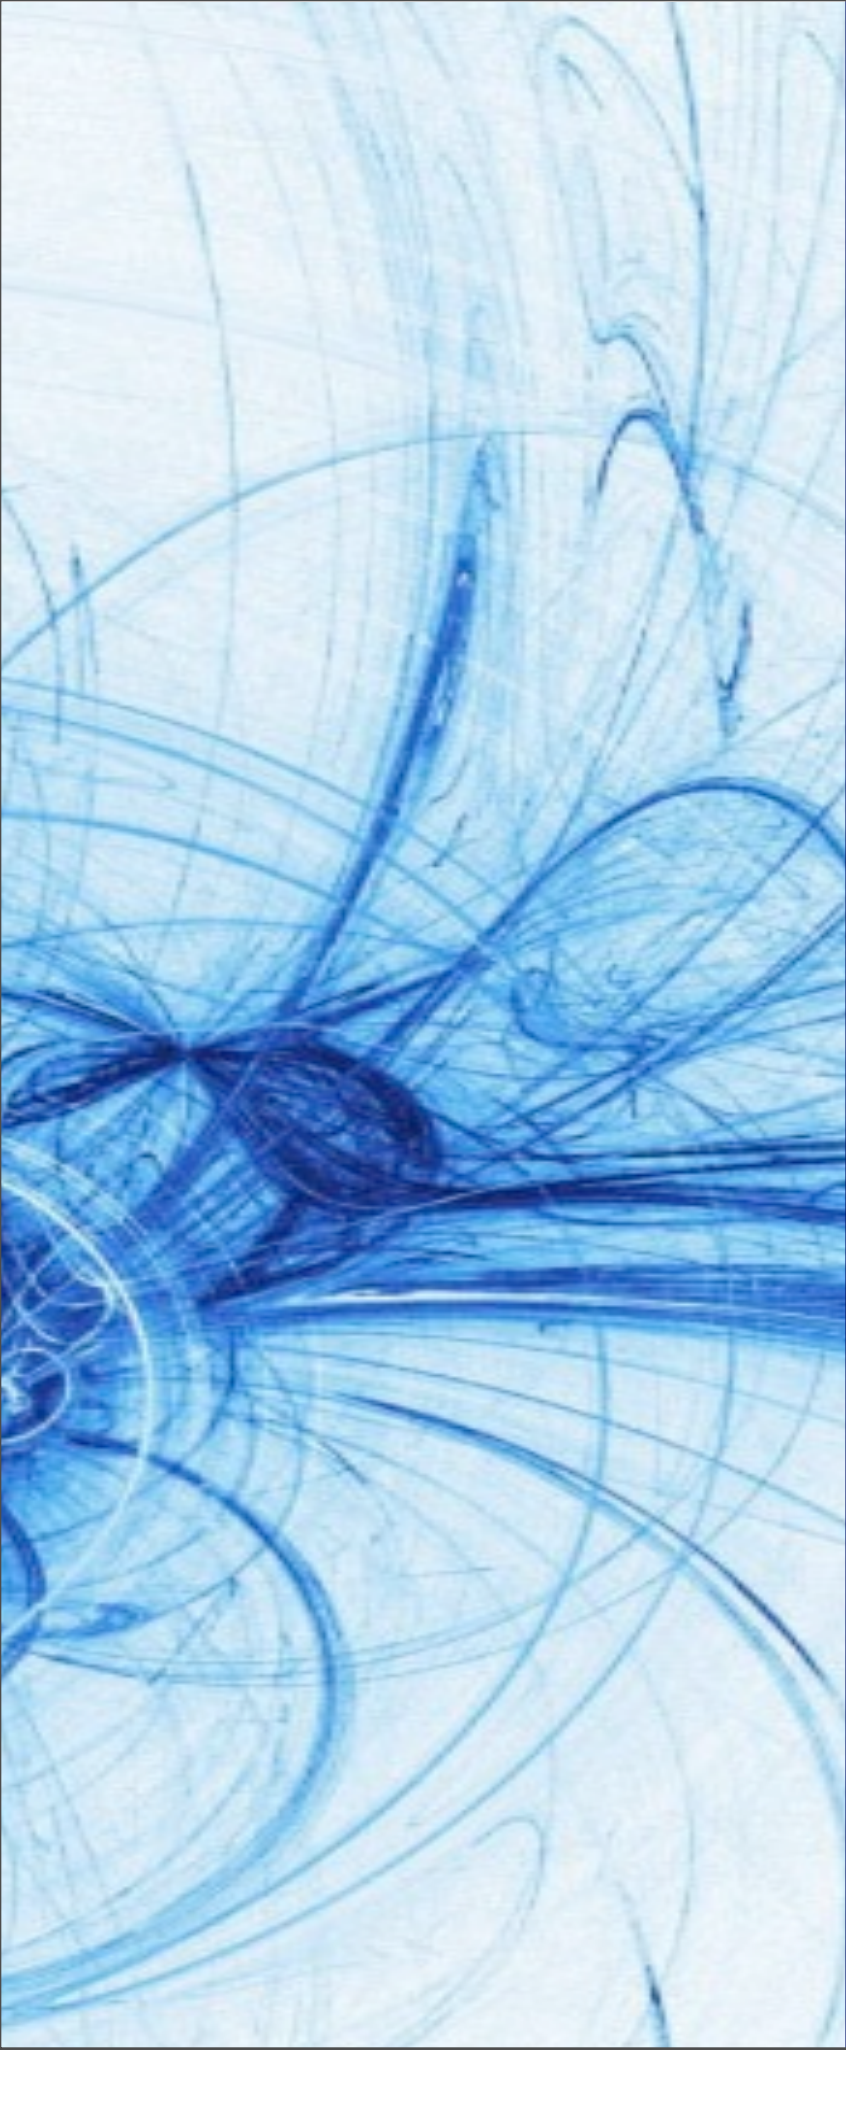

---

- Put together scholarly books in a collection
- Integration of the book in digital publishing process
- Development of a high quality publishing process at low cost
- Definition of an economic model for books in a transition period

**It is time to move forward**

# Érudit's approach

- 
- ❖ Our mission : promoting and disseminating of research outcomes
  - ❖ Érudit is a public infrastructure within the university community
  - ❖ Public financial support (universities and granting agencies) for the infrastructure
  - ❖ High standards and norms for digital publishing, dissemination and preservation
  - ❖ Real source of revenues for journals and (eventually) book publishers
  - ❖ Our goals: Open Source, Open formats, Open Access (as far as we can)
  - ◎ **A professional and credible alternative to commercial publishers**
