

File name: VR_1.2T_LP2_EarthScience_Science_11

Topic: The Atmosphere and weather

Keywords: tornado, climate change

Suggested grade level: Grade 11

Estimated activity time: 15 min

Earth Science – Science 11

The Atmosphere and the weather it creates and climate change

VR 360⁰ exploration: Jaw-dropping 360 degree time-lapse of TORNADO from close range

<https://www.youtube.com/watch?v=LD1-ez3XskQ&index=9&list=PLAanho1WGMod1hAcivQP5grtH2kdHV-I3>

General Introduction:

Participating in a VR 360⁰ exploration/expedition is like going on a vacation or trip. You have to plan your destinations, places to eat, relax, and where you would like to meet your friends and family. It means that you have to identify your objectives.

For teachers:

In this section, you will see a modified planning and preparation arranged into three steps. The steps are our suggestions. We hope they will help you maximize the learning opportunities a VR 360⁰ exploration/expedition can potentially offer.

Three steps:

- 1) Pre-exploration: Preview the playlist exploration yourself. By doing this, you are identifying possible questions and activities that might enrich students' VR experience.
- 2) During exploration: Provide guide or key questions or ask the students to formulate new questions about the playlist and encourage students to refer to other resources (e.g., YouTube videos, articles, etc.) to connect and enrich the playlist.
- 3) Post-exploration: Follow-up on the new questions and wonders students have identified. These questions might lead to an interdisciplinary inquiry project, blog posts or short video clips to link with the original unit or chapter coverage.

Description:

In this 15-minute exploration activity, you'll see a 360° panorama of a Jaw-dropping 360 degree time-lapse of TORNADO from close range.

“Check out this time-lapse of an EF2 tornado near Wray, Colorado on May 7, 2016, showing the "wobbly" path back and forth across the road! Video shot by Accuweather storm chaser/meteorologist Reed Timmer with @360fly camera mounted on the roof.” AccuWeather Published on Aug 11, 2016

Objective:

The core learning outcome of this playlist is to enrich students' understanding about tornadoes and spread public awareness in the event of natural calamities, like tornadoes.

However, unlike a regular 2D video, this VR provides a 360° panorama, which allows your students to focus on different points of interest that might vary from student to student. So, take time to explore the playlist using different angles and positions.

Jaw-dropping 360 degree time-lapse of TORNADO from close range

Suggested Guide:

1) Pre-exploration:

Review how tornadoes are formed:

<https://www.universetoday.com/75695/how-do-tornadoes-form/>

<http://www.weatherwizkids.com/weather-tornado.htm>

2) During exploration:

What key questions could pique students' interest as they watch this playlist?

As well, ask them to think of interesting questions they want to answer as they watch the playlist. Let them discuss these questions and their possible answers.

They can do this by groups of two or three.

With limited number of Google cardboards, let students work in pairs. Let them take turn to watch the playlist and do a Q & A. For example, Student 1 will describe to student 2 what he/she is seeing right now. Student 2 will explain the playlist, to Student 1 and each student will take turns doing Q & A.

3) Post-exploration:

Give time for the pair/class to think about the questions and answers they have generated after watching the playlist.

Then invite them to watch the link below. With the playlist, let them express their understanding, reactions into any interdisciplinary inquiry projects, blog posts, short video clips, etc.

The Most Powerful Tornado Recorded on Earth
