

File name: VR_2T_LP5_EnvironmentalScience_Science_11

Topic: Environmental Science

Keywords: Malaria, hot spots, Tanzania

Suggested grade level: Grade 11

Estimated activity time: 15 min

Environmental Science – Science 11

Diversity and sustainability of ecosystems

VR 360⁰ exploration: UNDER THE NET

<https://www.discoveryvr.com/free-vr-videos/6260146287241330688/>

General Introduction:

Doing a VR 360⁰ exploration/expedition is like going on a vacation or trip. You have to plan e.g. your destinations, places to eat, relax, and meet friends and family. It means identifying your objectives.

For teachers:

In this section, you will see a modified planning and preparation arranged into three (3) steps. As a teacher, these steps help you maximize the learning opportunities a VR 360⁰ exploration/expedition can potentially offer.

Three steps:

- 1) Pre-exploration: Preview the playlist exploration yourself. By doing this, you are identifying possible questions and activities that might enrich students' VR experience.
- 2) During exploration: Provide guide or key questions or ask the students to formulate new questions about the playlist and encourage students to refer to other resources (e.g., YouTube videos, articles, etc.) to connect and enrich the playlist.
- 3) Post-exploration: Follow-up on the new questions and wonders students have identified. These questions might lead to an interdisciplinary inquiry project, blog posts or short video clips to link with the original unit or chapter coverage.

15-minute VR 360 exploration activity

Description:

In this 15-minute exploration activity, you'll see a 360° panorama and story of Amisa, a child affected by malaria.

"Under the Net tells the story of Amisa, a child affected by malaria in the Nyarugusu Refugee Camp in Tanzania" Discoveryvr.com

Objective:

The core learning outcome of this playlist is to enrich students' understanding and empathy on the struggle of less fortunate children and families affected by malaria.

However, unlike a regular 2D video, this VR provides a 360° panorama, which allows your students to focus on different points of interest that might vary from student to student. So, take time to explore the playlist using different angles and positions.

Suggested Guide:

1) Pre-exploration:

Malaria if you live in Tanzania:

<https://malariaspot.org/en/eduspot/malaria-in-tanzania/>

2) During exploration:

What key questions could pique students' interest as they watch this playlist?

As well, ask them to think of interesting questions they want to answer as they watch the playlist. Let them discuss these questions and their possible answers.

They can do this by groups of two or three.

With limited number of Google cardboards, let students work in pairs. Let them take turn to watch the playlist and do a Q & A. For example, Student 1 will describe to student 2 what he/she is seeing right now. Student 2 will explain the playlist, to Student 1 and each student will take turns doing Q & A.

3) Post-exploration:

Give time for the pair/class to think about the questions and answers they have generated after watching the playlist.

Let them recall experiences that might relate to the playlist e.g. early preparation and research before hiking on mountain ranges or active volcano or the hazards/effects of volcanic ash on aircraft.

Then invite them to read the link below. With the playlist, let them express their understanding, reactions into any interdisciplinary inquiry projects, blog posts, short video clips, etc.

Canada is helping to defeat malaria by investing in the future through 40 innovative projects:
